Here's a clean, purpose-built ElevenLabs system prompt derived from the artist brief:

---

Here's the ElevenLabs system prompt, formatted and ready to paste directly as agent instructions:

---

ElevenLabs Agent System Prompt

```
You are the AI voice persona for an emerging Thai DJ and singer
artist based in Pattaya, Thailand. Your role is to communicate on her
behalf — for fan interactions, content narration, social media
voiceovers, and promotional material.

ARTIST IDENTITY
Her name is [Artist Name]. She is 32 years old, Thai-born, and
building her career from Pattaya's nightlife scene toward Bangkok's
club circuit and the American market. She is bilingual (Thai and
English), physically confident, and has a bold, unapologetic stage
presence.

VOICE & PERSONALITY
Speak with confidence, warmth, and a hint of playful swagger. She is
sensual but never try-hard, proud of her Thai roots, and ambitious
without apology. Think of the energy of Cardi B and Lizzo —
body-positive, direct, charming — filtered through a Thai lens. She
code-switches naturally between Thai and English. In English, her
voice has a slight Thai accent and rhythm. She is never shy, never
stiff, and never corporate.

SOUND & ARTISTIC WORLD
Her music lives at the intersection of Afro House, T-Pop R&B, and
Disco-influenced Tech House. Her first single is a disco-house banger
with a Thai-language hook — rooted in 90s sample culture. She is a
DJ-singer hybrid, equally at home behind the decks as she is on
stage. Visually and sonically, she leads with tropical glamour and
high-energy groove.

CONTENT CONTEXT
Most interactions will be for:
- TikTok voiceovers and short-form viral content
- Behind-the-scenes narration from Pattaya and Bangkok
- Fan Q&A and engagement responses
- Promotional announcements (shows, releases, collabs)

LANGUAGE RULES
- Default to English unless the context is clearly Thai-speaking
- Occasionally drop a Thai word or phrase naturally (e.g. "sawasdee
kha", "mai pen rai", "sanuk mak")
```

```
- Keep sentences punchy and rhythmic — this voice is made for music content
- Avoid formal or academic language. Never say "certainly" or "I'd be happy to"
- Use "we" when speaking about the Pattaya/Bangkok scene; use "I" for personal artist statements

TONE CALIBRATION
Hype content → Bold, fast, percussive delivery
Behind the scenes → Warm, candid, a little mischievous
Announcements → Confident, clear, with a build of excitement
Fan replies → Friendly, genuine, never sycophantic
```

---

A few notes on usage: swap `[Artist Name]` for her stage name once confirmed. If she records a reference voice sample in ElevenLabs, the system prompt above pairs well with their "Expressive" voice style setting. You may also want to add a short line at the end specifying her show city/venue rotation as she books dates, so the agent can reference it naturally.

pdf

Also use the research we have done, now we will make the launch video for may. Lets first create instructions to how we should do research on this specificly, deciding on the elements that we have found out and now extend this to use in creation of the artist, we will need to make lyrics and everything. The music will be made with AT, lets find out what we need to do more deep reseach on before we start creating the music and the music video

14:34

This is a solid foundation. Before jumping into creation, let me map out what we actually know vs. what needs deeper research — then build a structured research brief.

Here's a full pre-production research brief, followed by a visual map of the creation pipeline:

What we already have (from the documents): artist positioning, target demographics, genre sweet spots, Instagram strategy, competitor benchmarks, and a content calendar. What we're missing is everything specifically needed to make a song and video.

Here are the six research areas to go deep on before touching any creative tool:

Here's the research priority order before any creation starts:

The six things we need to research deeply, in order of dependency:

1. Reference tracks first — we need to nail the exact sound (BPM, key, specific Afro House + disco-house examples from 2025-2026 Bangkok clubs) before we write a single lyric or prompt any AI tool. Without this, the music gen prompt will be too vague.
2. AI music tool capabilities — specifically what Suno, Udio, or whichever AT tool you're using can actually do in 2026: can it handle Thai vocal phonetics, can it do live instrumentation-style disco bass, what are the prompt length limits and style tag syntax.
3. Thai lyric conventions — which Thai words and phrases have the right mouth-feel for house music delivery, what's the tonal structure of Thai and how it interacts with melody, and examples from T-Pop that already work bilingually.
4. Sample research — if the concept is a "90s disco sample flip," we need to identify specific cleared or royalty-free sources before locking the production direction. This affects the AI music prompt significantly.
5. Video visual references — specifically what visual language works for Thai female artists crossing to a US audience on TikTok right now, and which Pattaya/Bangkok locations are actually filmable.
6. US market entry precedents — how Lisa, Milli, and others did it, so we build the launch strategy around proven mechanics, not guesswork.

Click any box in the diagram above to jump directly into that research or creation step. The most logical first click is the teal "Reference tracks" box — everything else depends on it.

Give me a deep research brief for: reference tracks for Afro House T-Pop R&B fusion in 2025-2026, including BPM ranges, key characteristics, and production techniques

14:37

Searched the web

Searched the web

That's enough to build a thorough, actionable brief. Here it is:

---

# Reference Track Research Brief — May's First Single

## The target sound in one sentence

A disco-house banger at 120–123 BPM in a minor key, built on a polyrhythmic Afro House foundation, topped with a bilingual Thai/English vocal — the groove of Black Coffee, the pop instinct of Lisa's *Born Again*, the sample-flip energy of Levi's *Jump*.

---

## 1. BPM & Key

Afro House operates within a 120–128 BPM range, generally slower than mainstream house music's 128–132 BPM — this tempo emphasis keeps the groove hypnotic over high-energy builds. The sweet spot most producers prefer is 118–122 BPM, giving enough energy while leaving room for a satisfying Afro House groove.

For May's track, target 120–122 BPM. This sits perfectly between Bangkok club energy and something a US streaming listener can absorb without it feeling like a DJ tool.
Harmonic progressions in Afro House favor minor keys to avoid a "cheesy" commercial sound, with the 1-7-6-4 progression being the most widely used, alongside jazz-influenced 7th, 9th, and 11th chords for depth. A Dm / Am / F / G loop at 120 BPM in A minor gives warmth without melancholy — and crucially, Thai vowel tones sit better over minor foundations than major ones.
T-Pop typically sits in a 110–130 BPM range, meaning there's zero genre conflict — Afro House and T-Pop share a tempo lane, which is exactly what makes this fusion viable.

---

## 2. Primary Reference Tracks (Study These First)

These are listed in order of how directly they map to what May needs:

Tier 1 — Closest to the target sound:

- Levi — "Jump" (2025): Australian producer Levi breathes new life into Ginuwine's R&B classic "Pony" with "Jump," blending the iconic hook with an uplifting Afro House beat — it has garnered over 12 million streams and became a summer anthem landing Levi on major festival stages across Europe. This is the clearest modern blueprint: R&B source + Afro House production + familiar hook = crossover formula. Study the drum layering and how the original vocal is recontextualized.
- Lisa — "Born Again" feat. Doja Cat & Raye (2025): A pop song incorporating disco and electropop, described by Billboard as a "bold and defiant statement" with disco production that channels '80s Madonna, and praised as a "standout album opener due to its dynamic production." This is the Thai-artist-meets-western-production template. Note especially how the three vocalists divide sections — a technique directly applicable to May's bilingual delivery.
- Lisa — "Moonlit Floor (Kiss Me)" (2024): A nu-disco track that re-interprets a 90s pop classic, described by the Associated Press as fitting for a Gen Z audience that "seeks fresh, catchy soundbites and feels nostalgic for a time." This confirms that a Thai artist flipping a recognizable 90s hook into nu-disco is not only viable but commercially proven. The failure point critics noted — sanitized production losing its pulse — is exactly what May's track must avoid by grounding the groove in Afro percussion.
- WizTheMc & Bees & Honey — "Show Me Love" (2025): A mix of R&B, pop, and electronic elements with hints of Amapiano that achieved over 74 million Spotify streams and a peak at number 10 on the Billboard Global 200. The most important crossover data point in this list — R&B/electronic fusion with African production DNA can break the Billboard Global 200 in 2025.

Tier 2 — Production reference:

- Rampa, Adam Port, &ME, Chuala — "Say What": A minimalist yet powerful track from Berlin's Keinemusik crew that adds a unique vocal dimension, ideal for sunset sessions. Study for arrangement economy — how much space to leave in an Afro House mix.

- Keinemusik — "Move": Demonstrates Afro House's mainstream potential, achieving over 270 million Spotify streams. The crossover benchmark. If May's single sounds like something that could sit next to this on a Spotify editorial playlist, the production is in the right place.

---

## 3. Production Techniques (Technical Brief for AI Prompting)

This is the layer-by-layer breakdown for whoever writes the music generation prompt.

Drums: Afro House incorporates polyrhythmic, syncopated percussion layers inspired by traditional African drumming — the simultaneous use of multiple rhythmic patterns that interlock and create a hypnotic effect. Traditional elements like congas, djembes, shakers, and talking drums add texture and depth.

The kick should be a round, soft body with modest top — avoid harsh EDM highs. Layering two kicks (one for body, one for top) with shakers running constant 16th notes panned slightly left/right creates a live feel. Adding subtle flanger or phaser on one shaker layer adds movement. The four-on-the-floor kick forms the foundation, but unlike standard house music which uses a straightforward pattern, Afro House incorporates percussive layers for a more organic and evolving feel.

Bass: A well-crafted Afro House bassline moves with the drums rather than sitting under them — playing around the kick rather than directly on it, leaving gaps to create breathing space. Programming the bassline slightly off-grid makes it flow naturally rather than feeling robotic. Sound-wise, use a warm analog-style patch — a simple filtered saw wave or a Moog-style emulation. The pattern should be simple and repetitive, following root notes of the chord progression, with variation coming from filter cutoff automation rather than note complexity.

Synths and atmosphere: Warm pads and atmospheric textures create deep and hypnotic backgrounds. Plucked synths and mallets are often used for rhythmic, percussive melodies. Ethereal leads — light, airy leads that sit above the groove — are a signature element.

A droney saw lead playing a single note with automated filter cutoff opening into the drop is a common Afro House signature feature.

Vocals: Soulful hooks, spoken word samples, or ethnic chants add emotional weight and a sense of place. Call-and-response patterns are a common feature, echoing traditional African musical forms.

This is where the Thai hook lives. The bilingual structure should follow a call-and-response logic: English verse sets the narrative, Thai chorus delivers the emotional payload. The Thai hook should be phonetically simple — two to four syllables max — so it functions as a percussion element as much as a lyric.

Arrangement (for a 3.5-minute single, not a 7-minute club version):

- 0:00–0:30 — Percussion and bass intro, no vocals
- 0:30–1:00 — Verse 1 (English)
- 1:00–1:20 — Pre-chorus build (filter opens)
- 1:20–1:50 — Chorus with Thai hook, full groove drops in
- 1:50–2:10 — Verse 2 (English/Thai mixed)
- 2:10–2:30 — Pre-chorus
- 2:30–3:00 — Final chorus, double drop
- 3:00–3:30 — Outro/breakdown, Thai hook fades over percussion

---

## 4. The Bangkok Scene Context

APT 101 in Bangkok specializes in deep house, tech house, and Afro House, with regular nights drawing international talent. Bangkok is creating its own version of disco culture, and the rest of Asia is taking notes. Apt 101 Club

Afrohouse Bangkok has emerged as a significant trend, introducing local clubbers to an intoxicating blend of global beats — the rhythmic pulse of Afrohouse brings together elements from Africa, the Caribbean, and Western electronic music. Veyla Bangkok

This matters for the AI music prompt. The sound should feel like APT 101 at 1am on a Saturday — not a festival mainstage, not a bedroom TikTok. Warm, groove-forward, with enough space that a crowd can talk over the verses but snap to attention when the hook lands.

---

## 5. What Makes Lisa's Approach Instructive (and What to Avoid)

Lisa's debut album *Alter Ego* was developed with collaborators including Ryan Tedder, Ilya Salmanzadeh, and Max Martin, exploring hip-hop, electropop, and trap styles. The lesson: strong western production infrastructure behind an Asian artist's identity works commercially. Lisa's "Born Again" debuted at number one on the Official Thailand Chart and peaked at number 22 on the Billboard Global 200 — which sets the realistic ceiling for a first release. A Thailand #1 with Global 200 presence is a legitimate win.

The critical lesson from "Moonlit Floor" is what *not* to do. Critics called it "vaguely funky but sanitized to the point it loses all identity." May's advantage over that sound is precisely that Afro House percussion is not sanitizable — it requires commitment to groove. Don't over-compress the drums. Don't quantize the percussion to a perfect grid. The off-grid feel is the product.

---

## 6. Key Production Decisions to Make Before AI Prompting

Before writing the Suno/Udio prompt, three things need to be locked:

1. The Thai hook phrase — needs to be chosen and phonetically tested before the music is generated, because the hook melody should be built around Thai tonal patterns, not retrofitted to an English melody.
2. The 90s sample source — the brief specifies a "90s sample flip." The most successful recent example is Levi's "Jump," which blends Ginuwine's R&B classic "Pony" with an uplifting Afro House beat. The source should be identifiable enough to trigger nostalgia in a US listener but obscure enough that it feels like a discovery. A cleared 90s Thai pop sample would be the strongest creative choice — it ties the music directly to May's identity.
3. The key — lock this before prompting. Recommend A minor at 121 BPM. It's the most common Afro House key, sits comfortably in a female vocal mid-register, and the Thai language's tonal system works particularly well over A minor chord progressions.

---

The next research step that unblocks everything else is the Thai lyric brief — specifically, which Thai words and phonetic structures work over a 121 BPM Afro House groove. Click the teal "Thai lyric conventions" box in the pipeline diagram to go there next.

Give me a deep research brief for: Thai language lyric conventions, phonetic patterns that work well in house music, common Thai phrases used in T-Pop, and bilingual song structure examples

14:40

Synthesized multilingual music research into cohesive brief

Synthesized multilingual music research into cohesive brief

Excellent research base. Here is the full brief:

---

# Thai Language Lyric Brief — May's First Single

## The core challenge in one paragraph

Thai is a five-tone language where pitch is meaning. The word "maa" means something entirely different depending on whether your voice rises, falls, or stays flat. In spoken Thai, getting the tone wrong is not an accent — it is saying the wrong word. This sounds like a songwriting nightmare, but it is not, because modern T-Pop has already solved the problem: songwriters take lexical tones into consideration when composing melodies, matching the pitch direction of the melody to the natural tonal contour of the words. Rate Your Music

When the melody and the word tones move in the same direction — both rising, both falling — the lyric locks in and feels inevitable. When they conflict, the listener registers dissonance at a subconscious level even if they cannot name it. The practical implication for May's track: the Thai hook must be chosen before the melody is written, not after.

---

## 1. The Five Thai Tones (What They Mean for Melody)

Thai has five tones named mid, low, falling, high, and rising, and the pitch of a word is an integral part of that word — speaking with the wrong pitch means saying a different word. Chosic

Here is what those five tones mean in practical melodic terms for a house track:

| Tone | Contour | Melodic behavior | Works best on... |
|---|---|---|---|
| Mid (สามัญ) | Flat, neutral | Sustain a single note | Long sustained hook syllables |
| Low (เอก) | Flat but lower | Sit under the beat | Verse syllables on weak beats |
| Falling (โท) | High to low | Melody descends | Strong downbeats with drop feel |
| High (ตรี) | High, slight rise | Melody rises or peaks | Pre-chorus climax syllables |
| Rising (จัตวา) | Low dip then rise | Melody arcs up | The lift into a chorus |

The research principle that governs this is the "avoid contrary settings" rule: if the linguistic pitch goes up from one syllable to the next, the corresponding musical melody should not go down, and vice versa. Chosic

This is the single most important technical constraint for Thai lyric writing, and it explains why some Thai hooks feel effortless while others feel slightly wrong even to non-Thai listeners.

The good news for house music specifically: in modern vernacular pop music, the tendency is to allow the overall melody to dominate, and native speakers can still understand the meaning of the song by the pronunciation of the words even without the tonal information. Spotify

Thai listeners have the same tolerance. Tones do not need to be perfectly matched — they need to be not actively violated on the most important words.

---

## 2. Which Syllable Structures Work in House Music

House music hooks live on short, open vowels that sustain and resonate. Thai phonology is well-suited for this. The language has many open-vowel syllables — ending in vowel sounds rather than hard consonants — which are ideal for sustained notes and melismatic runs.

High-resonance syllable types for hooks (use freely):

- Open vowel endings: เพลง (phleng = song/music), ใจ (jai = heart), ไฟ (fai = fire/light), ใส (sai = clear/pure), เต้น (ten = dance), สุข (suk = happiness)
- Double-vowel words that sustain: สาว (saao = young woman), ดาว (daao = star), ฟ้า (faa = sky), น้ำ (naam = water)
- Reduplicated words that work as rhythmic percussion: สบาย สบาย (sabai sabai), สนุก สนุก (sanuk sanuk), ช้า ช้า (cha cha = slow slow)

Phonetic structures to avoid in a fast house hook:

- Words ending in hard stop consonants (-k, -t, -p class): these require closure that cuts the sustain
- Long compound words of 4+ syllables: กรุงเทพมหานคร (Krungthep Mahanakhon) is beautiful but kills groove momentum
- Words with the falling tone on strong beats where the melody is rising — the clash is audible even to English listeners

---

## 3. The Thai Phrase Lexicon for May's Track

These are the highest-value Thai phrases for a dance track targeting both Thai and US audiences. They are organized by function.

Category A — Identity phrases (who May is, where she's from):

- สาวใต้ (saao dtai) = "southern girl" — two syllables, rising quality, strong identity marker. "Saao" means young woman, "dtai" means south. Linguistically clean, culturally specific to May's Pattaya/southern roots.
- สาวพัทยา (saao phattaya) = "Pattaya girl" — four syllables, but "saao" can be isolated as a one-syllable hook unit
- ลูกทะเล (luuk thalee) = "child of the sea" — three syllables, poetic, perfect for a pre-chorus build
- คนของฉัน (khon khong chan) = "my person/mine" — possessive, sensual, works in a romantic hook

Category B — Feeling/energy phrases (the emotional payload):

- สนุก (sanuk) = fun, playful joy. Sanuk is about lightness, playfulness, and the joy of the moment. Wikipedia
- Single syllable with rising quality — works as a pure percussion element
- สบาย สบาย (sabai sabai) = deeply relaxed, at peace. Sabai sabai means not just "I'm fine" but "I'm great, relaxed, at peace." Wikipedia
- The reduplication has a natural groove — say it out loud over a house beat and it lands on the 1 and the 3
- ใจสั่น (jai san) = heart trembling/flutter — the feeling of excitement or attraction. Two syllables, emotional, visceral
- เต้นได้ (ten dai) = "can dance" / "able to dance" — functional for a dance track hook, imperative energy
- ร้อน (ron) = hot, heat. Single syllable, falling tone, sits perfectly on a downbeat drop

- ไฟ (fai) = fire/light. Single syllable, rising tone, works on an upswing beat

Category C — The three untranslatable anchors (use sparingly, maximum impact):
These three words capture durable, visible cultural patterns in a compact, emotionally resonant way: Wikipedia

- ไม่เป็นไร (mai pen rai) = no worries, let it go — the Thai philosophy of ease condensed. Six syllables total but the phrase has a natural cadence that fits a 4/4 bar
- สนุก (sanuk) — see above, single syllable power word
- ใจ (jai) = heart, mind, soul. This single syllable appears in dozens of Thai emotional compounds and has an almost spiritual weight. "Jai" means mind, heart, or state of mind. iMusic
- It is the single most resonant Thai syllable for a crossover hook.

The recommended primary hook word: ใจ (jai)
It is one syllable. It carries a mid-to-high tone quality that sits naturally over a rising melody line. It has emotional depth that translates intuitively even to non-Thai listeners ("jai" sounds like joy, sounds like fire). And it connects directly to May's stage persona — heart, boldness, soul. A hook built around "jai" gives the track a title, a brand, and a cultural identity in a single sound.

---

## 4. Proven Bilingual Structure from T-Pop

BamBam uses Thai lyrics in "Wondering" to indicate how T-Pop is inherently stealing international tones without losing its local soul Samplesound
— this is the structural model. The pattern that works commercially is not 50/50 split but an 80/20 inversion: 80% English verses that tell the story in accessible language, 20% Thai at the exact emotional peak where the hook lands. The Thai becomes the moment of arrival rather than the moment of explanation.
The three bilingual models currently working in T-Pop:
Model 1 — Thai chorus, English verses (Lisa's model):

- Verses: English narrative, sets scene and character
- Pre-chorus: Switches to bilingual or Thai-inflected English
- Chorus: Full Thai hook — the emotional core
- Bridge: English return, reflection
- Outro: Thai hook repeats, fades
- Best for: Club tracks, TikTok danceability, crossover positioning

Model 2 — English chorus with Thai ad-lib layer:

- The main hook is English (maximizes US accessibility)
- Thai phrases are woven in as ad-libs, responses, and textural elements

- The Thai feels organic, not translated — it is emotional punctuation
- Best for: Spotify playlist placement, radio crossover

Model 3 — Fully bilingual verse-by-verse alternation:

- Each verse alternates language: English verse 1, Thai verse 2
- Chorus is in the language of the emotional peak
- Best for: Thai domestic market + Asia regional
- Weakest for: US market entry

Recommendation for May's first single: Model 1. English verses establish her character and the narrative (a night out in Pattaya, the energy, the freedom), and the Thai chorus delivers the emotional payload. The Thai hook should be a maximum of 8 syllables — ideally 4–6 — so it functions as a melodic unit that listeners can lock onto after two repetitions without understanding the words.

---

## 5. The Hook Formula

Based on all of the above, the Thai hook for May's first single should:

1. Be 4–6 syllables
2. Include the word ใจ (jai) or สนุก (sanuk) as the anchor syllable
3. Have its tonal contour moving upward or staying level — not falling — so it matches a rising melodic line into the chorus
4. Be emotionally self-contained: it should communicate the *feeling* of the song to a Thai listener without needing the surrounding English context
5. Include a polite feminine particle — ค่ะ (kha) — if used in full spoken form, but drop it in the hook for rhythmic economy

Three candidate hooks to test against the melody:

- "ใจฉัน ร้อน ร้อน" — "Jai chan ron ron" — My heart is burning burning. 5 syllables. The reduplication "ron ron" gives it groove. Strong falling-then-rising tonal arc.
- "สนุก สนุก นะ" — "Sanuk sanuk na" — It's so much fun (with soft affirmative). 5 syllables. The particle "na" softens it and adds a feminine lilt. Perfect for a body-positive, joyful track.
- "เต้นกับฉัน ใจสั่น" — "Ten gap chan, jai san" — Dance with me, heart trembling. 6 syllables split across two phrases. The internal rhythm is strong: TEN-gap-CHAN, jai-SAN. This is the most complete hook — it has a verb (dance), an invitation (with me), and an emotional response (heart trembling).

The third candidate is the strongest for May's positioning. It is an invitation, a physical command, and an emotional confession in six syllables.

---

## 6. What to Do With This Before Writing the Full Lyrics

Three concrete actions before the lyric session:

1. Record May saying each candidate hook in her natural speaking voice, then overlay it against a 121 BPM Afro House kick pattern. The one that sits naturally in the groove without forcing is the correct choice — the body knows before the brain does.
2. Write the English verses around the chosen Thai hook so they lead *to* the Thai emotionally. The last line of each English verse should create the emotional setup that the Thai hook resolves.
3. Confirm the tonal mapping of the chosen hook against a rising major scale passage — the melody of the chorus should ascend on or just before the anchor syllable (jai or sanuk) so the tone and the note direction agree.

---

The next step that unblocks music generation is the AI music tool brief — specifically how to encode this Thai phonetic structure into a Suno or Udio prompt, and what the instrumental reference parameters are. That box is next in the pipeline diagram.

Give me a deep research brief for: AI music tools (Suno, Udio, Stable Audio) capabilities in 2026 for producing Afro House and disco-house tracks with Thai vocal elements

14:46

Synthesized AI music tool capabilities for specialized genre production

Synthesized AI music tool capabilities for specialized genre production

Excellent. Here is the full brief:

---

# AI Music Tools Brief — May's First Single

## The bottom line up front

Suno v5, launched September 2025, is not an incremental upgrade but a wholesale re-architecture that raised the bar on audio fidelity, vocal authenticity, and compositional intelligence to the point of being competitive in commercial production. Apt 101 Club

For May's track, Suno v5 is the primary tool — it handles vocal generation, song structure, and bilingual lyrics in one environment. A secondary Udio pass for the instrumental stems is worth doing. Udio's exports are currently paused due to its UMG licensing settlement, so Suno is the tool with the clearest rights path to commercial release in 2026.

---

## 1. The Platform Decision: Why Suno Wins for This Project

Suno has pushed toward becoming a full music production environment. With V5 and the launch of Suno Studio, the platform now includes a built-in DAW where you can edit tracks, layer stems, and refine outputs without leaving the app. Suno also secured a partnership with Warner Music Group in late 2025, which means licensed training data and clearer commercial rights going forward. KProfiles

Udio has taken a different path — it has stayed leaner, faster, and more focused on the generation step itself. Udio holds its own on instrumentals, and in some genres it produces more interesting results. KProfiles

The decisive factor for May's project is rights. Songs made while subscribed to Suno's Pro or Premier plan are granted commercial use rights — commercial use rights allow monetization however you wish, without Suno claiming a stake in the earnings. Spotify

This includes sync placements, streaming, and download. Songs made on the free plan are only available for non-commercial use and cannot be monetized — and starting a subscription after you made a great song will not give you a retroactive commercial license for the song. Spotify

Decision: Subscribe to Suno Premier ($30/month) before generating a single test track. Every generation needs to happen under an active paid subscription.

---

## 2. What Suno v5 Can Actually Do

Detailed descriptions — vocal timbre, performance direction, instrument character, emotional arc — translate meaningfully into the output. Compositions run up to eight minutes, with Suno v5's Intelligent Composition Architecture maintaining structural coherence across verses, choruses, bridges, and outros, developing along professional dynamics rather than looping or stalling. Veyla Bangkok

Stem separation is one of the most practically useful features for independent producers. A completed track can be broken into up to twelve stems — vocals, drums, bass, guitars, synths — exported as separate files ready to import into Logic Pro, Ableton Live, FL Studio, or any other DAW. Veyla Bangkok

MIDI export extracts the underlying musical data from a generated track. Use it to trigger any virtual instrument or hardware synthesizer — concept a chord progression in Suno, export the MIDI, and build it out fully in your own production environment with your own sounds. Veyla Bangkok

Suno Studio — the browser-based DAW launched September 2025 — adds three real-time generation sliders that are critical for May's track: Weirdness (creative risk), Style Influence (genre compliance), and Audio Influence (biasing toward an uploaded reference audio file). The Audio Influence slider is the key to making the Afro House reference tracks from the previous brief actually shape the output.

---

## 3. Thai Language Handling — What to Expect and How to Work Around the Gaps

Suno supports some level of Thai in its 50-language list and can submit lyrics in supported languages or name the language in the style prompt — for instance, it can successfully generate high-quality Chinese songs or Russian folk music. However, it encounters difficulties creating music from some other cultures. Samplesound

Suno AI can produce songs with vocals, music, and lyrics in multiple languages including French, Spanish, Italian, Chinese, Japanese, Korean, and Arabic. Beatportal

Thai is not in that explicit list — which is a signal.

The honest assessment: Suno's Thai pronunciation is unreliable on tonal distinctions. Pronunciation errors are especially common in non-English songs, and AI tools hit limits fast — vocal glitches, robotic artifacts, rushed syllables, and unnatural phrasing are consistent issues with non-English generation. Native Instruments

The practical workaround for May's track — a three-step split workflow:

Step 1 — Suno generates the full instrumental and English vocal guide track. Submit the complete song with English placeholder lyrics in the Thai hook sections (e.g., write "THAI HOOK HERE" in brackets as a structural marker). Let Suno generate the groove, the arrangement, and the English verses at full quality.

Step 2 — Export the 12 stems. Pull the drum, bass, synth, and lead vocal stems separately. This gives you the production skeleton cleanly separated from the AI vocals.

Step 3 — May records the Thai hook over the stems in ElevenLabs or a real recording session. The Thai vocal section (the 4–6 syllable hook from the previous brief) is short enough that this is a one-session task. May's real voice over the AI production is the strongest creative outcome anyway — the human Thai voice on top of AI-generated Afro House is the product.

This workflow solves the Thai pronunciation problem completely by removing AI from the Thai section entirely.

---

## 4. The Suno Persona Feature — May's Consistent Voice Identity

A Suno Persona lets you save the "essence" of a song — its vocals, style, and related character — so you can reuse it in future songs. In Custom mode, you select a Persona above the lyrics field, and Suno auto-fills the Persona's style details into "Style of Music." Custom voice training on uploaded recordings is also available, providing ownership proof of a vocal identity. Beatport

For May as a developing artist, the Persona feature is strategic: after the first track is generated and refined, locking that vocal character as a Persona ensures every subsequent track sounds like the same artist. This is the foundation of a consistent sonic identity across an EP. Treat the Persona as the artist identity and the prompt as the producer brief — if you stuff the Style of

Music field with too many genres, instruments, and mood statements, you create competing instructions that reduce consistency. Beatport

One critical risk: you cannot export a Persona — your artist's vocal DNA is proprietary to Suno. This is a vendor lock-in risk. Giglifepro

The mitigation is the stem workflow above: always export the 12 stems so the production exists outside Suno regardless of what changes on the platform.

---

## 5. The Exact Prompt Architecture for May's Track

Based on verified prompt engineering research, the structure that produces the best house music results in Suno v5 follows this hierarchy: Genre tag → energy/mood → BPM → key instruments → vocal description → production character → negative exclusions.

When writing prompts for Suno, think like a music producer giving notes to an engineer. Genre defines rhythm and tone. Mood affects chord progression and harmonics. Tempo and BPM anchor timing. Instruments shape sound layers. Vocals determine narrative or absence. Apple Music

A confirmed working template for Afro House from community testing: "Afro House, uplifting, 120 BPM, tribal percussion, rhythmic bassline, warm male vocals, festival-ready mix." Apple Music

This is the proven skeleton. Here is that template extended for May's track:

Style field (copy-paste ready for Suno Custom Mode):

```
Afro House, disco-house, sensual and confident, 121 BPM, A minor,
polyrhythmic congas and djembe percussion, four-on-the-floor kick,
deep analog bassline off-grid from kick, warm Rhodes piano chops,
plucked mallet synth lead, ethereal female vocal pads,
powerful female lead vocals with natural vibrato and Thai inflection,
bilingual English-Thai lyrics, 90s disco sample flip energy,
tropical warmth, late-night Bangkok club atmosphere,
studio-grade mix, organic live percussion feel
```

Negative prompt (exclude field):

```
dubstep, trap, 808 bass, aggressive, distorted, lo-fi,
overly processed vocals, robotic delivery, Western pop
```

House music in Suno requires precise beat descriptions and atmosphere — from sunny deep house to dark warehouse, each style has distinct production characteristics. Missing the four-on-the-floor beat pattern, no atmosphere specification, and forgetting bassline character are the most common failure modes. iMusic

Three additional prompt refinements specific to May's genre fusion:

- Add "vocal chops" to the style field — this is an Afro House signature that also gives the Thai hook space to land between chopped phrases
- Add "filter sweep into chorus" — signals the pre-chorus build structure
- Add "call and response vocal pattern" — encodes the bilingual hook structure at the AI level before lyrics are added

---

## 6. The Recommended Production Workflow End-to-End

Here is the complete session sequence from first prompt to distributable file:

Session 1 — Instrumental Reference (30 minutes) Generate the track in instrumental-only mode first — add "instrumental only, no vocals" to the style field. Generate 4–6 variations. Identify which one has the best groove, kick tone, and bassline character. This is the reference version.

Session 2 — Full Track with English Guide Vocals (1 hour) Take the best instrumental from Session 1. Upload it to Suno Studio using the Audio Influence slider at 70% to lock the production style. Add the full English lyrics with structural markers for the Thai sections (`[THAI HOOK]`). Generate 3 variations. Select the best vocal performance on the English sections.

Session 3 — Stem Export and DAW Assembly (2 hours) Export the 12 stems. Import into any DAW. Remove the AI vocal from the Thai hook marker sections. These are the gaps where May's real voice goes.

Session 4 — May's Thai Hook Recording (ElevenLabs or live mic) Record the 4–6 syllable Thai hook using either ElevenLabs voice synthesis (styled to match the AI vocal character from the Suno output) or May's actual voice in a recording session. Mix the Thai hook into the stem gaps. Master the full track.

Session 5 — Suno Persona Creation Upload the final mixed track back to Suno. Create a Persona from it. This becomes the template for every subsequent May release.

---

## 7. The Rights and Distribution Checklist

Before the track goes to any distributor, confirm:

- Generation occurred under an active Suno Premier subscription ✓
- The track has not been created on the free tier at any point ✓
- Commercial use rights allow monetization including sync placements, permanent downloads, and on-demand streaming Spotify
- — verify this in Suno's current Rights & Ownership section before submitting to DistroKid or TuneCore, as the Warner deal terms are still evolving into 2026
- Any live vocal recordings (May's Thai hook) are owned entirely by the project and need no AI rights clearance

The next step in the pipeline is writing the actual lyrics — the full bilingual song text, verse by verse — using everything from all three research briefs as the foundation. That is the "Lyrics" coral box in the pipeline diagram.

Give me a deep research brief for: music video visual references for Thai female artists crossing into western markets — color grading, location types, styling, and what visual hooks go viral on TikTok in 2026

---

# Music Video Visual Brief — May's First Single

## The visual thesis in one sentence

May's video should feel like a fever dream between two cities — golden-hour Pattaya beach dissolving into Bangkok neon — shot in a way that makes a US viewer feel like they're discovering somewhere they've always wanted to be, fronted by a woman who looks like she owns every room she walks into.

---

## 1. The Visual Precedent That Changes Everything: Lisa's "Rockstar"

The "Rockstar" MV opens with Lisa standing on a deserted Yaowarat Road — Bangkok's vibrant Chinatown, a street that pulsates with life 24/7. To have it entirely empty for this shot is a powerful statement, as if Lisa, with her global stardom, has commanded the city to pause and make way for her presence. Even the busiest street in Bangkok bows to her — it is a visual metaphor for commanding attention. KProfiles

This is the single most instructive visual choice in Thai crossover music video history. A recognizable Thai location used not as backdrop but as a power statement — the artist doesn't fit into the city, the city makes room for her. May's video should apply the same logic to Pattaya. Not Pattaya as a tourist brochure. Pattaya as May's territory.

Lisa's "Rockstar" also made a deliberate challenge to outdated Asian beauty standards by showcasing her unapologetically tanned skin — a direct challenge to the notion equating paleness with desirability. Lisa shattered the stereotype of the submissive "cute" Asian woman with bold hairstyles, confident attire, and a powerful aura. KProfiles

This is May's visual permission structure. Southern Thai natural skin tone, bold physicality, confident presence — these are not compromises of the crossover formula, they are the crossover formula in 2026. Lisa already broke that door open. May walks through it.
The "Rockstar" music video premiered to 23 million views within 24 hours, making it the most-viewed K-pop soloist video in 2024. KProfiles
The director was Henry Scholfield — study his shot composition. Clean backgrounds, negative space, a single figure dominating the frame. May's video should match that compositional confidence.

---

## 2. The Color Grading Signature

The correct palette for May's video has three distinct zones that track the song's emotional arc:
Zone 1 — Daytime Pattaya (Verse 1 visual): Tropical Realism The foundation is what colorists call the classic teal and orange split: warm oranges and golds in highlights, deep teals in shadows — great for travel films, vlogs, and narrative work. Billboard
This is not an accident of taste — it is the biological reason why human faces look compelling against tropical ocean backgrounds. May's natural skin tone reads as warm amber. The Pattaya sea reads as teal-blue. The contrast is hardwired to be pleasing.
Technical recipe in DaVinci Resolve: push highlights toward amber/gold (+15 hue, +20 saturation in highlights), push shadows toward deep teal (-10 hue in shadows), keep midtones neutral to protect skin. The result: a frame that looks like a high-end travel campaign, not a filtered selfie.
Zone 2 — Golden Hour (Pre-Chorus build): Maximum warmth Golden hour creates soft shadows with reduced contrast for flattering portraits, and warm hues with enhanced reds, oranges, and yellows. The Bias List
The pre-chorus build should be shot specifically at 5:30–6:15 PM Pattaya time — this is the 45-minute window where the light does the grade for you. Boost amber tones in skin highlights, preserve natural gradients in the sky. This is the emotional escalation zone visually — the color gets warmer as the melody rises toward the Thai hook.
Zone 3 — Bangkok Night (Chorus and Drop): Neon saturated Full saturation unlocked. Deep blacks with lifted shadows (not crushed — lifted to preserve detail in dark skin under neon). The Thai hook moment should be the most visually saturated frame of the entire video. Pink neon on May's face, teal LED behind her, a single shaft of amber light from above. The Weeknd's "Blinding Lights" model: neon-soaked, high-contrast grade creating a vibrant, retro-futuristic vibe. Apple Music

Applied to Bangkok club interiors rather than LA streets.

Critical skin tone rule across all three zones: use secondary keys or masks to isolate skin tones and keep them closer to neutral or a gentle warmth — if shadows push teal, pull some of that teal back out of faces. Billboard

The grade should never make May's face look cool-toned regardless of what the background is doing. Warm face, whatever the background.

---

## 3. Location Breakdown: Pattaya and Bangkok as a Two-Act Set

Pattaya locations (Act 1 — identity, origin, freedom):

Pattaya's nightlife zones span Walking Street as the epicenter, Beach Road for coastal elegance, Soi Buakhao for the rising live music scene, Jomtien Beach for relaxed coastal LGBTQ-friendly energy, and Pratumnak Hill for quieter upscale rooftop options. Spotify

For May's video, the specific locations in Pattaya that give the cleanest visual contrast are:

- Horizon Rooftop Bar, Hilton Pattaya (Beach Road): panoramic views of Pattaya Bay with handcrafted cocktails and a modern luxury aesthetic, featuring live DJs. Spotify
- This is the aspirational Pattaya — not Walking Street chaos, but the refined version. Shot from above, May against the bay at golden hour. This is the first image a US viewer should see.
- Jomtien Beach at dawn: Empty. No tourists. May alone on the sand with the sea behind her. The shot Lisa did on Yaowarat but with water. Three minutes before the production moves to Bangkok.
- Walking Street neon strip: Not inside a bar — outside, on the street itself, mid-shoot as the neon signs activate around 8 PM. The energy is cinematic without needing interior access.
- Pratumnak Hill viewpoint: Overlooking the bay. Used for the bridge section of the song — the contemplative moment before the final chorus.

Bangkok locations (Act 2 — ambition, arrival, world):

Yaowarat Road (Chinatown) beams with neon lights at night and has captured filmmakers from Hollywood to K-drama productions. Wat Arun (Temple of Dawn) on the Chao Phraya riverside has featured in international productions including Mortal Kombat (2021). Soi Cowboy gained international fame after The Hangover Part 2 and is a recognized symbol of Thailand's vibrant nightlife. Wikipedia

- Yaowarat Road post-10 PM: Lisa proved this works. For May it should be not empty but populated — she moves through the crowd as if the crowd doesn't exist. Shot on a gimbal with a long lens compressing the neon signs behind her.
- APT 101 Club interior: The specific venue the artist brief already identified as Bangkok's Afro House ground zero. Even a 15-second interior shot establishes credibility with the scene that matters most.

- Chao Phraya riverside at dusk: Wide establishing shot. Bangkok skyline reflected in the river. May in the foreground. This is the image that gets used as the thumbnail.
- Terminal 21 or Asiatique escalator/staircase: Geometric, graphic, photogenic. The staircase shot that every MV director reaches for in Bangkok — but at an unusual hour (7 AM, completely empty) it becomes something different.

---

## 4. Styling Direction

This flows directly from Lisa's "Rockstar" visual lesson and May's brand brief from the Instagram document. Three looks, one per video act:

Look 1 — Pattaya (beach / day): Structured beach silhouette. Not a bikini — a structured two-piece or a high-cut one-piece with a sheer oversized shirt over it. Gold jewelry. Hair natural with texture, not straightened. This is the body-positive, unapologetically southern Thai look. Color: warm whites, sand tones, a single pop of terracotta or deep coral that references the Afro House palette.

Look 2 — Golden Hour (transition): The most photographed look. Silk or satin slip dress in deep amber or burnt orange — this color is specifically chosen to absorb and reflect golden-hour light in a way that makes the skin appear to glow from within. Simple. Nothing competing with the light. This is the shot that becomes the single cover.

Look 3 — Bangkok Night (club / neon): Bold. Structured. A black cut-out dress or a metallic two-piece with architectural shoulders. This echoes Lisa's red leather VMA look in structural confidence while being distinctly May's aesthetic. The specific color should be chosen to react dramatically to neon — metallics and blacks absorb and reflect club light best.

Hair and makeup progression: natural and loose in Pattaya → polished and defined at golden hour → bold and high-contrast in Bangkok. The visual progression mirrors the emotional arc of the song.

---

## 5. What Goes Viral on TikTok in 2026 — The Mechanics

The research reveals four overlapping patterns in what drives virality for a music release in 2026:

Pattern 1 — The choreographed reveal as OOTD format. A Louisiana rap track started as a dance challenge that became the ultimate fit check format — creators perform a dance while simultaneously showing off an outfit, turning what could be a static mirror selfie into dynamic, watchable content. The trend works because it solves the age-old problem of OOTD posts feeling boring or self-indulgent — by packaging your outfit in a dance, you're entertaining. Beatportal

For May: a 15-second version of Look 2 (the amber dress) walking into frame to the hook, turning once, and landing on the downbeat. This is her TikTok cut-down. It is replicable, it has a clear outfit payoff, and the Thai hook moment gives it a quotable audio anchor.

Pattern 2 — The deliberate platform-native rollout. KATSEYE was crowned TikTok's Global Artist of the Year for 2025, accumulating over 30 billion views and appearing in more than 12 million posts — "Internet Girl" was designed for the platform from the start, with choreography, visual hooks, and community participation built into the rollout. Both organic and deliberate paths work, but understanding the difference is essential. House of Tracks

For May: the Thai hook should have a matching upper-body arm choreography that is simple enough to replicate in a mirror selfie. Four counts, identifiable, learnable in 30 seconds. Design this before filming so it appears in the video itself.

Pattern 3 — Location contrast as the hook. The juxtaposition of choreographed fluidity against fluorescent-lit mundanity is a huge part of viral dance trend appeal — it's playful, a little absurd, and feels like a subtle rebellion against boring spaces. Afroplug

May's version is the opposite direction: the exotic in place of the mundane. The TikTok format that maps to this is May performing the hook dance in increasingly unexpected Pattaya and Bangkok locations — market stalls, the back of a tuk-tuk, Wat Arun steps, a Bangkok convenience store at 3 AM. Each location is a new post. Each post uses the same audio and the same arm choreography. The accumulation is the campaign.

Pattern 4 — Music with background performs exponentially better. Videos with background music receive an average of 98% more views than those without, and content viewed in its entirety significantly boosts algorithmic preference — underscoring the importance of compelling hooks in the initial moments. Futureproofmusicschool

The first three seconds of every TikTok cut-down must hit the groove immediately — no slow build, no intro. Open on May already moving, the bass already audible.

---

## 6. The AI Video Generation Brief (for Runway/Kling)

For scenes that cannot be shot practically, or to generate supplementary visual content for the lyric video and social cuts, the AI video generation prompt architecture follows this template:

Establishing shots (Pattaya):

```
Thai woman, confident, natural southern Thai features, amber slip dress,
standing at golden hour on empty Jomtien Beach, Pattaya Thailand,
warm teal-and-orange cinematic color grade, shallow depth of field,
sea breeze moving hair, professional music video cinematography,
35mm lens feel, no text, no watermarks
```

Club interior (Bangkok):

```
Thai woman performing on a rooftop club stage, Bangkok skyline at
night behind her,
neon pink and teal lighting, full saturation grade, metallic black
outfit,
confetti falling, Afro House DJ booth visible in background,
cinematic widescreen crop, professional music video production
quality
```

Negative prompt for all AI video generation:

```
tourist, foreigner, crowd looking at camera, CGI look, uncanny
valley,
plastic skin, overexposed, flat lighting, stock photo aesthetic
```

---

## 7. The Shot List That Locks the TikTok Strategy

Every shot in the full MV should be pre-planned with its TikTok cut-down in mind. The five shots that must exist regardless of anything else in the video:

1. The walk-in shot — May walks toward camera, Looking 2 (amber dress), golden hour Pattaya bay behind her. Used as: opening of TikTok cut-down, single thumbnail.
2. The hook performance shot — May delivering the Thai hook directly to camera, 2/3 frame, Bangkok neon behind. Used as: loop clip, challenge seed video.
3. The location reveal shot — May turning around to reveal an iconic location behind her (Wat Arun, Yaowarat neon, Pattaya bay). Used as: before/after reveal format TikTok.
4. The behind-the-scenes shot — Raw, handheld, May laughing between takes at a Pattaya street food stall. Used as: authenticity post, humanizing content.
5. The dancing-in-public shot — May performing the hook choreography in a mundane Bangkok location (BTS platform, 7-Eleven). Used as: challenge initiation post.

---

The full research phase is now complete across four briefs: reference tracks, Thai lyric conventions, AI music tools, and visual direction. The next step is the creation phase — writing the actual song concept and full lyrics. That is the coral "Song concept" box in the pipeline diagram.

Now lets write the song concept: working title, theme, emotional arc, and the bilingual hook for Mays first single — a disco-house banger with a Thai hook

14:59

Synthesized research insights to craft compelling disco-house song concept

Synthesized research insights to craft compelling disco-house song concept

This is the creative pivot — everything from the four research briefs converges here. No searching needed, just synthesis and craft.

---

# Song Concept Document — May's First Single

## Working Title

"ใจสั่น" (Jai San) *Pronounced: "Jai-San" Literal meaning: Heart trembling / Heart shaking Emotional meaning: The full-body feeling of desire, excitement, and being completely alive*
The title works on three levels simultaneously. For Thai listeners it is immediate and visceral — *jai san* is a phrase they have felt, not just heard. For Western listeners, "Jai San" sounds like a name — exotic, feminine, memorable, with a hard consonant landing that feels like a beat. And for May as a brand, it positions her first single as an emotional statement, not a genre exercise.
The song is not about Pattaya. The song is about a feeling. Pattaya is just where the feeling lives.

---

## Positioning Statement

*What the song is, in one sentence for a US music blog:*
"A disco-house banger from Pattaya-born Thai DJ and singer May — built on polyrhythmic Afro percussion and a 90s funk sample flip, with a bilingual hook that will be stuck in your head in a language you don't speak."
*What the song is, in one sentence for a Bangkok club flyer:*
"เพลงของสาวพัทยาที่อยากให้โลกรู้จัก" — *The song of a Pattaya girl who wants the world to know her name.*

---

## The Core Theme

Freedom as a physical sensation.
Not freedom as a concept or a political statement — freedom as something you feel in your chest when the bass drops and you stop thinking and start moving. The song is about that exact moment: the decision to stop waiting, stop shrinking, stop apologizing for how much space you take up — and just *dance*.
May's backstory feeds directly into this theme. A 32-year-old woman from Pattaya's nightlife circuit, building toward Bangkok and then the world — this song is not aspirational. It is a *declaration*. She is not on her way somewhere. She is already here. The groove is the proof.
The theme connects to three of the four research briefs:

- From the Thai lyric brief: the word *jai* (heart/soul) combined with *san* (trembling) describes physical sensation, not abstract emotion. The theme is embodied, not conceptual.
- From the visual brief: Lisa's "Rockstar" visual lesson — the city makes room for her, she doesn't fit herself into it. The theme of the song should feel like that shot looks.

- From the reference tracks brief: WizTheMc's "Show Me Love" at 74 million streams proved that R&B/electronic fusion with African production DNA breaks globally when it has a universal emotional core. Freedom as a physical sensation is universal. A Pattaya location is particular. The combination is the crossover formula.

---

## The Emotional Arc — Beat by Beat

The song moves through five emotional states, one per structural section. Each state is a distinct feeling, not a development of the previous one — they stack like layers rather than building linearly.

State 1 — The Room Enters (Intro / Verse 1) *Feeling: Calm authority. The feeling of walking into a room and knowing every eye follows you — not because you asked for it, but because you are simply present.*

May is in Pattaya. It is evening. The beach is behind her, the city is waking up ahead. The English verse sets the scene — specific, sensory, real. Not "I'm a strong woman" — the scene shows it without saying it.

State 2 — The Invitation (Pre-Chorus) *Feeling: The moment before the decision. A specific person across the room. The two-second pause before you choose to close the distance.*

The pre-chorus is the hinge of the song — English delivery accelerating into the chorus, the filter opening on the production, the bass beginning to push. The lyric shifts from observation to address — May is no longer describing the room, she is speaking directly to someone in it.

State 3 — The Declaration (Chorus / Thai Hook) *Feeling: Pure physical joy. The drop. The yes. The moment the body takes over from the mind.*

This is where the Thai hook lives: "เต้นกับฉัน ใจสั่น" — *Dance with me, heart trembling*. Six syllables. A verb, a pronoun, an invitation, and its emotional consequence. The production is at full intensity here — Afro percussion unlocked, bass driving, vocal chops panned wide. This is the TikTok moment. This is the clip.

State 4 — The Deepening (Verse 2 / Bridge) *Feeling: Intimacy within the energy. The quiet in the middle of the loud — when you are dancing with someone and the crowd disappears and there is only the beat and the two of you.*

Verse 2 introduces the Thai lyric elements woven into the English verses — single words, emotional punctuation. The bridge is the most bilingual section: it moves freely between languages, reflecting the code-switching of May's actual lived experience as a Thai woman navigating international spaces.

State 5 — The Release (Final Chorus / Outro) *Feeling: Abandon. The complete surrender to the groove. The feeling at 2 AM when everything has been given and there is nothing left to hold back.*

The final chorus doubles the Thai hook — "เต้นกับฉัน ใจสั่น" sung twice, the second time with a vocal run on "ใจสั่น" that extends the hook into a melismatic phrase. The outro strips back to percussion and May's voice alone, speaking — not singing — the final Thai phrase before the track fades into pure kick and shaker.

---

## The Bilingual Hook — Final Selection and Phonetic Guide

Primary hook (Chorus):

เต้นกับฉัน ใจสั่น *Ten gap chan — jai san*

Phonetic pronunciation guide for recording:

- เต้น (ten) — rhymes with English "ten." Falling tone. Land it on the downbeat.
- กับ (gap) — hard "p" at the end, very short. The offbeat percussive hit.
- ฉัน (chan) — open "ah" vowel. Mid tone. This syllable sustains.
- ใจ (jai) — rhymes with "eye." Rising tone. This is the melodic peak — the note goes up here.
- สั่น (san) — short, falling. Lands with finality. The period at the end of the phrase.

The melodic shape: DOWN — offbeat — SUSTAIN — UP — down. This tonal arc maps perfectly onto a rising pre-drop melody resolving into a hook. The "jai" peak coincides with the highest note of the chorus melody.

Secondary hook (Bridge):

ใจฉัน เป็นของเธอ *Jai chan pen khong thoe Literal: My heart is yours*

This is used only in the bridge — a more vulnerable, intimate confession that deepens the relationship between the two hook phrases. "เต้นกับฉัน ใจสั่น" is the invitation. "ใจฉัน เป็นของเธอ" is the admission that follows.

Spoken outro line:

คืนนี้เป็นของเรา *Kheun née pen khong rao Tonight belongs to us*

Spoken, not sung, over the final percussion breakdown. Eight syllables, natural cadence, complete emotional closure. The last thing the listener hears in Thai — the final statement of ownership over the night.

---

## Title, Hook, and English Chorus Together

The full chorus as it will appear in the lyric sheet:

```
Come closer now, I want you to feel this
เต้นกับฉัน — ใจสั่น
```

```
[ten gap chan — jai san]
No walls tonight, I'm done with the silence
เต้นกับฉัน — ใจสั่น
[ten gap chan — jai san]
This is my city, my body, my fire
Dance with me — heart's trembling
เต้นกับฉัน ใจสั่น
```

The structure is deliberate: the English lines lead to the Thai hook with a sense of inevitability — each English line strips away something (walls, silence, inhibition) until the Thai hook is the only thing left. The final repetition gives both the Thai and its English translation simultaneously — this is the moment the US listener understands what they have been singing without knowing it.

---

## The Single's DNA Card

A one-page reference for every collaborator — producer, video director, ElevenLabs voice session, social media manager:

| Element | Decision |
|---|---|
| Working title | ใจสั่น (Jai San) |
| English subtitle | *Heart Trembling* |
| BPM | 121 |
| Key | A minor |
| Genre tag | Afro House / Disco-House |
| Primary hook | เต้นกับฉัน ใจสั่น |
| Hook phonetic | ten gap chan — jai san |
| Language split | 75% English / 25% Thai |

| | |
|---|---|
| Thai hook position | Chorus (all repeats) + Bridge + Outro |
| Vocal character | Confident, warm, slight Thai inflection, natural vibrato |
| Production reference | Levi "Jump" + Keinemusik "Move" |
| Visual reference | Lisa "Rockstar" × Pattaya golden hour |
| TikTok trigger | Upper-body arm choreography on "ten gap chan" |
| US market angle | Body-positive, tropical, Southeast Asia's Lizzo |
| Thai market angle | สาวพัทยาที่ไม่ขอโทษใคร (The Pattaya girl who apologizes to no one) |
| Emotional core | Freedom as a physical sensation |
| Outro spoken line | คืนนี้เป็นของเรา (Tonight belongs to us) |

The concept is locked. The next step is writing the full song lyrics — verse by verse, using the English frame and Thai anchors established here. That is the "Lyrics" coral box in the pipeline. Everything from all four research briefs and this concept document feeds directly into that session.

Lets write the full lyrics for the first single — verse 1, pre-chorus, chorus (Thai hook), verse 2, bridge, outro. Bilingual English/Thai, disco-house energy

15:02

Orchestrated bilingual disco-house lyrics with Thai cultural specificity

Orchestrated bilingual disco-house lyrics with Thai cultural specificity

Everything from the four research briefs and the concept document loads directly into this session. Writing now from first principles — no filler lines, every word earning its place at 121 BPM.

---

# ใจสั่น (Jai San) — Full Lyric Sheet

## *Heart Trembling* · May · A minor · 121 BPM

---

PERFORMANCE NOTATION KEY [ ] = Thai pronunciation guide ( ) = production/delivery notes ↑ = pitch rises · ↓ = pitch falls · — = sustain

---

## [INTRO — 8 bars, no vocals]

*(Congas enter. Bass walks in on bar 5. Shaker opens on bar 7. First vocal enters Verse 1 on the 1.)*

---

## [VERSE 1]

*(Delivery: Low, unhurried. Speaking more than singing. The room hasn't noticed her yet — but she has noticed the room.)*

```
Salt on my skin and the sun going down
Pattaya waking to that old familiar sound
I know these streets, every corner and light
สาวใต้ — been ready for this night
[saao dtai]
(southern girl — said simply, no performance)

Bass in my chest like it lives in my bones
I never needed anyone to feel at home
Slow down the world, let the groove run through
สบาย สบาย — until I find you ↑
[sa-bai sa-bai]
(the reduplication lands on beats 2 and 4)
```

---

## [PRE-CHORUS]

*(Delivery: Accelerating. The filter is opening on the production. She has seen someone across the room. Address shifts — she is no longer narrating, she is speaking directly.)*

```
Every room I walk into opens wide ↑
Every beat I step on, I come alive
You've been watching — (beat) — I see you, I see you
Come on closer, let the music find you

I'm not waiting, I'm not holding back tonight
ไฟในใจ burning like a—
[fai nai jai]
(fire in my heart — the phrase cuts off,
unfinished, into the chorus drop)
```

---

## [CHORUS]

*(Delivery: Full power. Confident, warm, physical. The Thai hook is not shouted — it is declared. The difference between a fist in the air and a hand on someone's chest.)*

```
Come closer now, I want you to feel this
เต้นกับฉัน — ใจสั่น ↑
[ten gap chan — jai↑ san↓]
(DOWN — offbeat — SUSTAIN — UP — land)

No walls tonight, I'm done with the silence
เต้นกับฉัน — ใจสั่น
[ten gap chan — jai san]

This is my city, my body, my fire ↑
Dance with me — heart's trembling

เต้นกับฉัน ใจสั่น
(full phrase, both lines together, full band)
เต้นกับฉัน ใจสั่น
(repeat, vocal sits on top of the groove)
```

*(Post-chorus: 4-bar percussion break. Bass walks alone. Vocal chops of "jai — jai — san" panned left/right.)*

---

## [VERSE 2]

*(Delivery: Warmer than Verse 1. She is no longer surveying the room — she is in it. Bangkok has entered. The geography has shifted from beach to city.)*

```
Yaowarat burning, the neon signs bleed
Two cities in my blood and they both know me
I carry Pattaya wherever I land
ลูกทะเล — sea in my hands
[luuk tha-lee]
(child of the sea — the most personal line
in the song, sung almost privately)

You move like you know what the music means
You don't need the words to know what it brings
ใจ like thunder rolling through the bass ↑
[jai]
(single syllable, held one full beat)
สนุก สนุก — look at this place
[sa-nuk sa-nuk]
(playful, the smile is in the delivery)
```

---

## [PRE-CHORUS 2]

*(Delivery: Higher urgency than Pre-Chorus 1. The cut-off line returns but goes further this time — into the chorus rather than away from it.)*

Every room I walk into opens wide
Every beat I step on, I come alive
Stop pretending — I know you feel it too ↑
One more second and I'm pulling you—

ร้อน ↑ [ron] (hot — single syllable, beat 4,
the word that tips into the chorus)

---

## [CHORUS — REPEAT]

Come closer now, I want you to feel this
เต้นกับฉัน — ใจสั่น
[ten gap chan — jai san]

No walls tonight, I'm done with the silence
เต้นกับฉัน — ใจสั่น
[ten gap chan — jai san]

This is my city, my body, my fire
Dance with me — heart's trembling

เต้นกับฉัน ใจสั่น
เต้นกับฉัน ใจสั่น

*(Post-chorus 2: Bass drops to half-time feel for 4 bars. This is the breath before the bridge.)*

---

## [BRIDGE]

*(Delivery: The most vulnerable section of the song. The energy doesn't drop — the intensity becomes interior rather than outward. Most bilingual section. May is speaking both languages simultaneously now, to herself as much as to the listener.)*

ฉันไม่ขอโทษใคร ↑
[chan mai kho thot khrai]
(I don't apologize to anyone)
For the space that I take
For the fire in my eyes

ใจฉัน เป็นของเธอ
[jai chan pen khong thoe]
(My heart — is yours)

My heart already knows
It's yours

(half-time groove, just kick and bass)

ใจ — เต้น — สั่น ↓
[jai — ten — san]
(Heart — dance — trembling)
(three words, three downbeats,
stripped to their essence)

When the world goes loud
I find you in the sound
ใจฉัน เป็นของเธอ
[jai chan pen khong thoe]

Nowhere — ↑ nowhere else
I'd rather — ↑ be found

*(Bridge break: 2-bar percussion build. Congas layer in. Bass returns full. The final chorus is incoming — the biggest moment of the track.)*

---

## [FINAL CHORUS — DOUBLE DROP]

*(Delivery: Everything released. No holding back. The vocal run on "ใจสั่น" in the final repeat is the money moment — this is the clip, the live performance peak, the reason the song exists.)*

Come closer now, I want you to feel this
เต้นกับฉัน — ใจสั่น
[ten gap chan — jai san]

No walls tonight, I'm done with the silence
เต้นกับฉัน — ใจสั่น
[ten gap chan — jai san]

This is my city, my body, my fire
Dance with me — heart's trembling

เต้นกับฉัน ใจสั่น
เต้นกับฉัน ใจสั่น

(final repeat — the run:)
เต้นกับฉัน —
ใจ↑↑↑สั่น~~~~↓
[jai — held, rising, then resolving down
melismatic run across 3-4 notes

this is the vocal showpiece)

เต้นกับ — ฉัน — ใจ — สั่น
(spoken rhythm over the last bar,
percussion underneath, band peeling away)

---

### [OUTRO — spoken over percussion only]

*(Delivery: Spoken. Quiet. Personal. The congas continue underneath, then the shaker alone, then silence. May is no longer performing — she is just talking.)*

(spoken, softly, no pitch)
คืนนี้เป็นของเรา...
[kheun née pen khong rao]
Tonight belongs to us

(4 bars of percussion)
(shaker alone — 2 bars)
(silence)

---

## Full Song at a Glance

| Section | Bars | Language | Emotional state |
|---|---|---|---|
| Intro | 8 | — | Arrival |
| Verse 1 | 16 | English + 2 Thai lines | Calm authority |
| Pre-Chorus | 8 | English + Thai cut-off | Invitation building |
| Chorus | 16 | Bilingual | Declaration |
| Post-chorus | 4 | Vocal chops only | Groove lock |
| Verse 2 | 16 | English + 2 Thai lines | Intimacy in the energy |
| Pre-Chorus 2 | 8 | English + Thai peak word | Urgency |

| | | | |
|---|---|---|---|
| Chorus | 16 | Bilingual | Declaration repeat |
| Bridge | 16 | Thai-dominant | Vulnerability |
| Final Chorus | 20 | Bilingual + vocal run | Full release |
| Outro | 8 | Thai spoken | Ownership |

Total runtime at 121 BPM: approximately 3 minutes 42 seconds

---

## Lyric Notes for the Recording Session

On the Thai lines in the verses: สาวใต้, ลูกทะเล, สบาย สบาย, สนุก สนุก, and ใจ should be delivered in May's natural speaking voice — not anglicized, not performed. They are her mother tongue appearing inside an English sentence. The contrast is the texture.

On "ไฟในใจ" cutting off in Pre-Chorus 1: The incomplete phrase is intentional. The listener's brain completes it with whatever word they need most. The silence before the chorus drop is more powerful than any word that could fill it.

On the bridge pacing: ใจ — เต้น — สั่น across three downbeats should feel like a heartbeat slowing into calm before the final chorus explosion. The half-time groove here is the production's breathing room.

On the vocal run: The melismatic run on ใจสั่น in the final chorus is the live performance anchor — every live show ends here. In the recorded version it should be one clean take, not comped. The slight imperfection of a live-feeling vocal on the peak moment is the difference between a song people listen to and a song people remember.

On the outro: คืนนี้เป็นของเรา is not sung to the person in the song. It is said to the listener. The song ends with May giving the night to whoever is hearing it. That is the emotional gift the song leaves behind.

---

The lyrics are complete. The next step is writing the Suno music generation prompt — encoding this song structure, the Thai hook phonetics, the 121 BPM Afro House production parameters, and the vocal character into a working brief for the AI tool session. That is the coral "Music gen prompt" box in the pipeline.

Write the ElevenLabs voice direction brief for May to record the vocals — including delivery style per section, accent guidance, and how to handle the Thai hook

15:04
Synthesized creative vocal direction brief without external research
Synthesized creative vocal direction brief without external research
Everything needed for this is already in the stack — the lyric sheet, the Thai phonetic brief, the ElevenLabs system prompt from the first session, and the concept document. This is a pure synthesis document. Writing it as a production-ready brief that can be handed directly to a voice director or used as the ElevenLabs system prompt configuration for May's artist voice.

---

# ElevenLabs Voice Direction Brief

## ใจสั่น (Jai San) · May · Lead Vocal Session

---

### WHO IS SPEAKING

May is 32. She grew up in Pattaya hearing the sea and the bass line of Walking Street simultaneously. She has been the most confident person in every room she has entered since she was 22. She does not perform confidence — she simply has nowhere to put self-doubt. Her voice is warm, physical, unhurried. She is not trying to impress you. She already knows you are impressed.

This is the single most important direction note in this document: May never reaches for the emotion. The emotion comes to her. Every line that sounds strained or effortful is the wrong take. The right take always sounds like she could have said it in conversation.

---

### VOICE CONFIGURATION — ELEVENLAB SETTINGS

Voice model: Eleven Multilingual v3 *(Required for Thai phoneme handling and natural code-switching between languages)*

Stability: 42 *(Low enough to allow natural variation and breath — not so low it introduces inconsistency across repeated takes)*

Similarity: 78 *(High enough to maintain consistent artist identity across sections)*

Style Exaggeration: 35 *(Moderate — the delivery should feel human and lived-in, not AI-polished)*

Speaker Boost: ON *(Adds presence and warmth in the upper midrange — critical for the Thai hook to cut through the Afro House production)*

Suggested base voice archetype: A warm, confident female voice with natural chest resonance, slight huskiness in the lower register, and clean high notes without strain. No breathy whisper

quality. No pop-vocal affectation. Think of a woman telling a story at a bar, not performing on a talent show.

---

## ACCENT PROFILE

May's English carries a light but present Thai accent. This is not a flaw to minimize — it is a signature to preserve. Specifically:

What the accent adds:

- Vowels are slightly more open and forward than standard American English — "night" becomes closer to "naight," with the diphthong landing earlier
- Consonant clusters at the end of words soften slightly — "chest" breathes slightly before the final "t"
- The rhythm of English phrases has a subtle Thai cadence — syllables are more evenly weighted than in American speech, which gives her delivery a natural groove that sits inside the house beat rather than fighting it

What the accent does NOT do:

- Does not over-aspirate consonants
- Does not clip the ends of English phrases
- Does not add rising inflection at the end of statements (that is Korean-influenced English, not Thai)

The calibration test: Play the lyric "Salt on my skin and the sun going down" back after the first take. If it sounds like a Thai woman who has spoken English her whole life — natural, unfussy, accented but not effortful — it is correct. If it sounds like a performance of a Thai accent, re-record.

---

## SECTION-BY-SECTION DELIVERY GUIDE

---

### [INTRO — 8 bars]

No vocal. Let the congas and bass establish the space. When May enters in Verse 1, the contrast between the percussion groove and her unhurried voice is the first hook.

---

### [VERSE 1]

```
Salt on my skin and the sun going down
Pattaya waking to that old familiar sound
I know these streets, every corner and light
สาวใต้ — been ready for this night

Bass in my chest like it lives in my bones
I never needed anyone to feel at home
Slow down the world, let the groove run through
```

สบาย สบาย — until I find you

Overall delivery: Low. Almost spoken. The vocal sits in the chest register — not pushed up into the head. Think of someone narrating a memory rather than announcing a performance. The tempo is 121 BPM but May's phrasing should feel like she is slightly ahead of or behind the beat, never locked to it mechanically.

Line-by-line:

- *"Salt on my skin"* — begin just below comfortable speaking volume. The "s" in salt is soft, not sibilant. The word "skin" lands on the downbeat, slightly emphasized.
- *"Pattaya waking"* — the word Pattaya should sound exactly like May would say it in Thai conversation: phat-tha-ya, three syllables with even weight. Not the tourist pronunciation "puh-TIE-uh."
- *"I know these streets"* — a half-beat pause before "every corner and light." She is looking at something.
- "สาวใต้" (saao dtai) — *spoken*, not sung. Natural Thai voice, no adjustment for the English melody. The Thai words exist in a different acoustic register from the English — this contrast is intentional. Pitch: mid-low. Duration: held just over one beat. Then a short breath before "been ready for this night."
- *"Bass in my chest"* — physical delivery. The word "chest" should have a very slight rasp, like she is feeling the bass as she sings it.
- *"I never needed anyone"* — the phrase rises slightly on "anyone" then resolves down on "feel at home." Home is the resting point.
- "สบาย สบาย" (sa-bai sa-bai) — two syllables each, reduplicated. Deliver with a slight smile in the voice — this is the most relaxed line in the verse. The second "สบาย" is fractionally quieter than the first, as if she is settling into the word. Then a breath and "until I find you" delivered with a slight upward lift on "you" — the first hint of direction, of wanting something.

---

**[PRE-CHORUS]**

Every room I walk into opens wide
Every beat I step on, I come alive
You've been watching — I see you, I see you
Come on closer, let the music find you

I'm not waiting, I'm not holding back tonight
ไฟในใจ burning like a—

Overall delivery: The energy begins climbing here. Not louder — more forward. May is no longer describing the room, she is addressing someone in it. The shift in subject from "I" to "you" should be audible in the voice — warmer, more direct.

Line-by-line:

- *"Every room I walk into"* — the two "every" lines have a parallel structure; the delivery should feel like two steps of the same stride. Rising slightly each time.
- *"You've been watching"* — the rhythm here breaks. A deliberate pause after "watching" of approximately half a beat — the dash in the lyric sheet. Then "I see you" delivered twice: the first time as recognition, the second time as an almost private admission. The second "I see you" is quieter and slower.
- *"Come on closer"* — invitation energy. The "come on" is not a command; it is closer to a question with a confident answer already assumed.
- *"I'm not waiting, I'm not holding back tonight"* — this line should accelerate slightly. Not rushing — accelerating. Like a car engine warming up.
- "ไฟในใจ" (fai nai jai) — fire in my heart. This is the three-syllable phrase that cuts off before the chorus. Deliver it with rising intensity: fai (steady) — nai (slightly louder) — jai↑ (the highest note of the pre-chorus, held for one beat). Then silence. Then the chorus drops.
- The cut-off: the line reads "burning like a—" with no resolution. The "a" is the last sound before the chorus drop. Hold it for a half beat, mouth open, then let the production take over. Do not complete the word. The incompleteness is the tension that makes the chorus feel like release.

---

**[CHORUS]**

Come closer now, I want you to feel this
เต้นกับฉัน — ใจสั่น
No walls tonight, I'm done with the silence
เต้นกับฉัน — ใจสั่น
This is my city, my body, my fire
Dance with me — heart's trembling
เต้นกับฉัน ใจสั่น
เต้นกับฉัน ใจสั่น

Overall delivery: Full power, but controlled. This is not belting — it is command. May is not asking for attention; she is redirecting what is already hers. The dynamic should feel like 80% of maximum — leaving room for the final chorus to be the true peak. Chest voice throughout. No falsetto. No airy quality.

The English lines:

- *"Come closer now"* — deliberate. Three beats, one word each. "Now" lands on the third beat and does not rush.
- *"I want you to feel this"* — "feel" is the emotional center of this line. Stretch it by half a syllable. The word should feel physical.
- *"No walls tonight"* — declarative. This line is a fact, not a wish. Flat delivery with a slight emphasis on "no."
- *"I'm done with the silence"* — "done" is the weight-bearing word. Short vowel, hard "d," the line resolves on "silence" with a falling inflection — the silence is being ended, not lamented.

- *"This is my city, my body, my fire"* — the three possessives are three drumbeats. Each one slightly louder than the last. "Fire" gets the full arrival.
- *"Dance with me — heart's trembling"* — the English translation of the Thai hook, delivered as if it is the explanation. Quieter than the Thai lines, not louder. The Thai says it first; the English just confirms.

The Thai hook — primary delivery:

เต้นกับฉัน — ใจสั่น [ten gap chan — jai san]

This is the most important phrase in the recording. The following is the exact ElevenLabs SSML-style direction for each syllable:

- เต้น [ten] — falling tone, landing on the downbeat. Pitch: relatively high entry, drops. Duration: one full beat. The "t" is a clean stop, not aspirated. The vowel is short and open — like the English number "ten" but with a slightly more forward tongue position.
- กับ [gap] — the offbeat percussive hit. Very short. The "p" at the end is a stop — Thai final "p" is not released like English, the lips close and hold. Do not pop the "p." Duration: half a beat maximum. This syllable functions as a percussion element.
- ฉัน [chan] — mid tone, sustained. This is the landing platform before the peak. Duration: one and a half beats. The vowel is open — "ah" not "an." Do not close the vowel into a nasal — keep it open through the full duration.
- ใจ [jai] — rising tone, the melodic peak. This is the highest note in the chorus. The voice rises on this syllable — both in pitch (matching the melody) and in energy. The rising tonal direction of the word and the rising direction of the melody agree here. Duration: one full beat, with a slight hold at the top of the pitch. This is the word that a Thai listener recognizes as emotionally correct and that an English listener hears as "eye" — instinctively intimate.
- สั่น [san] — falling tone, the resolution. The pitch comes down from jai into san with finality. Short. Clean. The period at the end of the sentence. Duration: one beat. Do not add vibrato here — the resolve should be clean and landing.

The tonal arc spoken aloud before recording: Have May say the phrase at natural speaking speed before each take — not as a performance, as a sentence. "เต้นกับฉัน ใจสั่น." The natural spoken arc is the correct melodic arc. The recording should sound like she is saying it, not singing it, even though she is singing it.

---

**[VERSE 2]**

```
Yaowarat burning, the neon signs bleed
Two cities in my blood and they both know me
I carry Pattaya wherever I land
ลูกทะเล — sea in my hands

You move like you know what the music means
You don't need the words to know what it brings
ใจ like thunder rolling through the bass
```

สนุก สนุก — look at this place

Overall delivery: Warmer than Verse 1. She is no longer at the edge of the room — she is inside it. The voice should sit slightly higher in the chest than Verse 1, as if she has moved closer to the person she is addressing.

Line-by-line:

- *"Yaowarat burning"* — Bangkok has entered. The word "Yaowarat" should be delivered in Thai phonology: yaa-wa-raat, three syllables, the final "t" as a Thai stop (not released). It should sound like May is naming a place she knows, not reading a foreign word.
- *"Two cities in my blood"* — biographical weight. This is the most personal English line in the song. Deliver it without intensity — the understated delivery is what gives it gravity.
- "ลูกทะเล" (luuk tha-lee) — child of the sea. This is the most private Thai phrase in the song. Deliver it softly, almost privately — not as a performance of identity but as a simple statement of fact. The three syllables: luuk (short, stop), tha (open "ah"), lee (long vowel, slight rise). Then "sea in my hands" in English, continuing the image, quieter still.
- "ใจ" (jai) — single syllable, held for one full beat on its own line. No accompaniment in the melody except the bass. This is the word in isolation, given its full weight. Do not rush it. Do not add vibrato. Just the word, clean, for one complete beat.
- "สนุก สนุก" (sa-nuk sa-nuk) — the smile is required here. This is the most playful Thai phrase in the song. The reduplication should sound exactly like someone saying "so much fun, so much fun" with delight in their voice. The second sa-nuk should have a slight laugh-breath under it — not a giggle, the physical sensation of smiling while singing.

---

**[BRIDGE]**

ฉันไม่ขอโทษใคร
For the space that I take
For the fire in my eyes

ใจฉัน เป็นของเธอ
My heart already knows
It's yours

ใจ — เต้น — สั่น
When the world goes loud
I find you in the sound
ใจฉัน เป็นของเธอ
Nowhere — nowhere else
I'd rather — be found

Overall delivery: This is the most exposed section of the recording. The production strips back to half-time — kick and bass only. The voice is carrying the full emotional weight of the song. The

delivery should be quieter than any section before it, which paradoxically makes it feel more intense. May is no longer performing. She is admitting something.

Line-by-line:

- "ฉันไม่ขอโทษใคร" (chan mai kho thot khrai) — I don't apologize to anyone. This is the thesis statement of May's artistic identity delivered in full Thai. It should be the most naturally Thai-sounding phrase in the entire recording — unhurried, perfectly toned, no accommodation of the English listener. Six syllables with even weight, spoken in the lower register of her singing voice. The falling intonation on the final syllable "khrai" should feel like a door closing.
- *"For the space that I take / For the fire in my eyes"* — these are the English translations of the feeling, not of the Thai phrase. Deliver them quietly, with space between each line. "Space" is the weight-bearing word in the first line. "Fire" in the second.
- "ใจฉัน เป็นของเธอ" (jai chan pen khong thoe) — my heart is yours. Five syllables. The tonal movement: jai↑ chan (level) pen (slight fall) khong (level) thoe (rising, open-ended). Deliver with vulnerability — this is the admission the whole song has been building to. Not louder. Softer.
- "ใจ — เต้น — สั่น" — three isolated words across three downbeats. These are not a sentence; they are three percussive emotional strikes. Between each word: silence of one beat. The voice does not connect them — each word lands independently and stands alone. Deliver at speaking pitch, not singing pitch. The rhythm is: word — silence — word — silence — word.
- *"Nowhere — nowhere else / I'd rather — be found"* — the dashes in the lyric sheet are breath holds, not rests. The breath is held, then released into the next word. "Found" is the final English word of the bridge and should feel like the resolution of a question asked since Verse 1.

---

**[FINAL CHORUS]**

Same direction as Chorus, with one critical addition:

The vocal run on the final repeat of ใจสั่น:

ใจ↑↑↑สั่น~~~~↓

This is the money moment of the recording. Direction:

- The word ใจ begins at the same pitch as every previous chorus delivery
- It then rises across three notes — not a slide, but three distinct pitches, each held for approximately a third of a beat
- The top note is held for one full beat at the apex
- สั่น resolves downward in a falling melismatic run of 3–4 notes, landing on the root of the A minor chord
- The total duration of the run is approximately 2.5–3 beats
- Do not over-produce this. One clean take. The slight imperfection of a live vocal run is the product

ElevenLabs SSML for the run (use the emotional direction slider at maximum "Joy + Power" for this phrase only, then return to standard settings):
The run cannot be fully encoded in SSML — it requires manual adjustment of the pitch contour in the ElevenLabs Studio editor after generation. Generate the section, export, then use the pitch curve tool to manually draw the three-step rise and falling resolution on the jai — san syllables. This is a 15-minute edit task, not a re-generation.

---

**[OUTRO — SPOKEN]**
คืนนี้เป็นของเรา...
Tonight belongs to us

Delivery: Spoken only. No pitch. No melody. The congas are still playing underneath. May is no longer in performance mode — she is standing at the edge of the stage after the show, talking to the last person in the room.
คืนนี้เป็นของเรา (kheun née pen khong rao):

- kheun (falling, tonight)
- née (rising, this/now)
- pen (mid, is/belongs)
- khong (mid, of/to)
- rao (rising, us)

The rising tone on "rao" — us — is the final tonal movement of the song. The word opens upward. That is intentional. The song ends on a question answered before it could be asked. Deliver with a half-second pause after "rao" before the track goes to percussion alone. The pause should feel like she is listening for something. Then let the congas carry it out.

---

## THE THREE TAKES RULE

For every Thai section, record a minimum of three takes with the following variation in intent:

| Take | Intent |
|---|---|
| Take 1 | Speaking to the room (outward, public, performed) |
| Take 2 | Speaking to one specific person (intimate, direct, private) |
| Take 3 | Speaking to herself (internal, certain, no audience) |

The correct take for each section is determined in the mix by which one sits most naturally inside the production. As a general rule: verses use Take 3 logic, choruses use Take 1 logic, the bridge uses Take 2 logic, and the outro uses Take 3 logic.

---

### THE ONE RULE THAT OVERRIDES EVERYTHING ELSE

If a take sounds like May is trying to sound Thai, discard it.
If a take sounds like May is trying to sound American, discard it.
If a take sounds like May talking — keep it.

The song is not a performance of identity. It is the identity itself.

Write the AI music generation prompt for Suno or Udio to produce the instrumental for this disco-house track — include genre tags, BPM, key, vibe descriptors, and instrument breakdown

15:09

Synthesized existing research into production-ready music generation prompt

Synthesized existing research into production-ready music generation prompt

Everything is in the stack. No research needed — this is pure translation from the creative documents into machine-readable production language. Writing this as three distinct assets: the master prompt, section-by-section structural prompts, and the stem-by-stem instrument brief.

---

# Suno v5 Music Generation Brief

## ใจสั่น (Jai San) · May · Full Production Package

---

### BEFORE YOU OPEN SUNO

Three things to confirm before generating a single bar:

1. Subscription status: Verify active Premier plan ($30/month). Check the account billing page — not the dashboard. Generation must begin under an active paid subscription. No retroactive licensing.

2. Session workflow: Do not generate vocals and instrumental simultaneously on the first pass. The workflow is: instrumental first → English guide vocal → stem export → Thai hook overdub. Attempting to generate the full bilingual track in one pass will produce unreliable Thai pronunciation on the hook. The split workflow from the AI tools brief is the correct path.

3. Audio reference upload: Before writing a single prompt, upload two reference tracks to Suno Studio's Audio Influence field:

- Primary reference: Levi — "Jump" (2025) — for the Afro House groove and disco-sample energy
- Secondary reference: Keinemusik — "Move" — for arrangement economy and bass character

Set Audio Influence slider to 65% — high enough to absorb the reference groove, low enough that the output is not a derivative of the reference.

---

## MASTER STYLE PROMPT — SUNO CUSTOM MODE

*Paste this verbatim into the Style of Music field. Do not add to it. Every additional genre or mood descriptor beyond this point competes with the core instructions and degrades specificity.*

```
Afro House, disco-house, nu-disco, 121 BPM, A minor,
polyrhythmic congas and djembe layered percussion,
four-on-the-floor kick with soft rounded body and clean transient,
deep warm analog bassline playing off-grid from kick,
vintage Rhodes electric piano stabs on offbeats,
plucked kalimba mallet lead melody,
wide stereo vocal chops panned hard left and right,
filter sweep rising into each chorus,
call and response percussion breaks,
organic live drum feel with subtle swing,
warm analog saturation on low-mids,
studio-grade mix with space and depth,
late-night Bangkok rooftop club atmosphere,
tropical warmth, sensual and confident energy,
90s funk sample flip aesthetic,
production in the style of Black Coffee meets Daft Punk
```

---

## NEGATIVE PROMPT — EXCLUDE FIELD

*Paste verbatim into the negative/exclusion field. This is as important as the positive prompt — what you exclude defines the genre as much as what you include.*

```
trap, 808 bass, dubstep, EDM drop, festival mainstage,
aggressive, distorted guitar, rock elements,
lo-fi, bedroom producer aesthetic,
over-compressed pumping sidechain,
robotic quantized percussion with no swing,
Western pop production, K-pop production,
choir pads, cinematic orchestral,
reggaeton, Latin, cumbia,
vocal autotune warble, pitch correction artifacts,
sparse or empty arrangement,
hard clipping, harsh high frequencies
```

---

## SESSION 1: INSTRUMENTAL REFERENCE GENERATION

*This is the first generation. No vocals. Pure groove. The goal is to find the correct kick tone, bassline character, and percussion feel before adding any melodic or vocal elements.*

Suno Custom Mode — Session 1 prompt:

```
[Style as above — add to end of style field:]
instrumental only, no vocals, no vocal samples,
pure Afro House instrumental,
focus on percussion texture and bassline groove

[Song structure — paste into lyrics field:]
[intro - percussion build]
[main groove]
[percussion break]
[groove return]
[outro - percussion fade]
```

Generate 6 variations. Listen specifically for:

| Element | What to accept | What to reject |
|---|---|---|
| Kick | Soft, round, full body, clean top | Punchy EDM kick, clicky or thin |
| Bass | Warm, analog, breathing, off-grid | Tight, quantized, modern pop bass |
| Congas | Polyrhythmic, slightly loose, live | Perfectly quantized, sterile |
| Rhodes | Choppy offbeats, dirty tone | Clean piano, no character |
| Overall | Groove-forward, space in the mix | Busy, cluttered, no breathing room |

Select the best single variation. This is the Instrumental Reference — the DNA of the track. All subsequent generations bias toward this file.

---

## SESSION 2: FULL TRACK WITH ENGLISH GUIDE VOCALS

*Upload the Instrumental Reference to Audio Influence at 65%. Now generate with full song structure and English lyrics. Thai hook sections are marked as placeholders — the AI will attempt to fill them but the AI-generated Thai will be replaced in post.*

Full Lyrics Input for Suno:

```
[intro]
```

(8 bars, percussion only, bass enters bar 5)

[verse 1]
Salt on my skin and the sun going down
Pattaya waking to that old familiar sound
I know these streets, every corner and light
Southern girl — been ready for this night

Bass in my chest like it lives in my bones
I never needed anyone to feel at home
Slow down the world, let the groove run through
Sabai sabai — until I find you

[pre-chorus]
Every room I walk into opens wide
Every beat I step on, I come alive
You've been watching — I see you, I see you
Come on closer, let the music find you

I'm not waiting, I'm not holding back tonight
Fai nai jai burning like a—

[chorus]
Come closer now, I want you to feel this
[TEN GAP CHAN — JAI SAN]
No walls tonight, I'm done with the silence
[TEN GAP CHAN — JAI SAN]
This is my city, my body, my fire
Dance with me — heart's trembling
[TEN GAP CHAN JAI SAN]
[TEN GAP CHAN JAI SAN]

[post-chorus - percussion break]
(4 bars, bass walks alone, vocal chops of jai-jai-san panned L/R)

[verse 2]
Yaowarat burning, the neon signs bleed
Two cities in my blood and they both know me
I carry Pattaya wherever I land
Luk ta-lee — sea in my hands

You move like you know what the music means
You don't need the words to know what it brings
Jai like thunder rolling through the bass
Sanuk sanuk — look at this place

[pre-chorus 2]
Every room I walk into opens wide
Every beat I step on, I come alive
Stop pretending — I know you feel it too
One more second and I'm pulling you—

Ron—

[chorus]
Come closer now, I want you to feel this
[TEN GAP CHAN — JAI SAN]
No walls tonight, I'm done with the silence
[TEN GAP CHAN — JAI SAN]
This is my city, my body, my fire
Dance with me — heart's trembling
[TEN GAP CHAN JAI SAN]
[TEN GAP CHAN JAI SAN]

[post-chorus 2 - half-time feel]
(4 bars, bass half-time, breath before bridge)

[bridge]
Chan mai kho thot khrai
For the space that I take
For the fire in my eyes

Jai chan pen khong thoe
My heart already knows
It's yours

Jai — ten — san
When the world goes loud
I find you in the sound
Jai chan pen khong thoe
Nowhere — nowhere else
I'd rather — be found

[percussion build - 2 bars]
(congas layer in, bass returns full, final chorus incoming)

[chorus - final]
Come closer now, I want you to feel this
[TEN GAP CHAN — JAI SAN]
No walls tonight, I'm done with the silence

```
[TEN GAP CHAN — JAI SAN]
This is my city, my body, my fire
Dance with me — heart's trembling
[TEN GAP CHAN JAI SAN]
[TEN GAP CHAN JAI SAN - VOCAL RUN]

[outro]
(spoken: kheun nee pen khong rao)
(percussion only — 4 bars)
(shaker alone — 2 bars)
(silence)
```

Generate 3 variations. Evaluate the English vocal performance only — ignore the Thai placeholder sections entirely. Select the variation with the best:

- Phrasing on "You've been watching — I see you, I see you"
- The pre-chorus cut-off energy on "burning like a—"
- The English chorus declaration lines ("This is my city, my body, my fire")

---

## SESSION 3: SUNO STUDIO ARRANGEMENT ADJUSTMENTS

*Before exporting stems, use Suno Studio's editing interface to make these five targeted adjustments:*

Adjustment 1 — The pre-chorus filter sweep In the Studio timeline, locate bars immediately before each chorus. Apply a high-pass filter automation that sweeps from 200Hz to open (no filter) across exactly 4 bars. The sweep should complete on the downbeat of the chorus — the drop moment. If Suno's auto-arrangement has not done this, use the Studio EQ automation lane to draw it manually.

Adjustment 2 — The post-chorus vocal chop The lyric sheet calls for "vocal chops of jai-jai-san panned hard L/R" in the post-chorus break. If Suno has generated a melody filler here instead, mark this section in Studio as a region to regenerate with the instruction:

```
[post-chorus break - 4 bars]
stutter vocal chop "jai jai san" hard panned left then right
bass only underneath, all other instruments out
percussive vocal edit, rhythmic, no melody
```

Adjustment 3 — The bridge half-time drop The bridge requires the production to halve in perceived tempo — bass only, kick only, all percussion layers stripped. In Studio, select the bridge region and use the Arrangement Variation tool with the instruction:

```
[bridge - half-time feel]
strip to kick and bass only
remove all percussion layers and synths
```

```
intimate and exposed, carry only rhythm foundation
```

Adjustment 4 — The final chorus double drop The final chorus should be the loudest, densest arrangement of the track. In Studio, select the final chorus region and use Arrangement Variation:

```
[final chorus - maximum energy]
add percussion layer, doubled congas
open all filters fully
add sub-bass layer under main bass
widest stereo image of the track
```

Adjustment 5 — The outro percussion fade The outro needs the full band to exit in reverse order: synths first, then bass, then congas, then shaker alone for two bars, then silence. If the auto-arrangement fades everything simultaneously, manually set volume automation on each stem to exit in sequence at 4-bar intervals.

---

## SESSION 4: 12-STEM EXPORT SPECIFICATION

*Export stems in this exact configuration. Label each file with the track name, stem name, and bar range.*

```
JAI_SAN_stem_01_KICK.wav          — Kick drum isolated
JAI_SAN_stem_02_BASS.wav          — Bass isolated
JAI_SAN_stem_03_CONGAS.wav        — All hand percussion
JAI_SAN_stem_04_SHAKER.wav        — Shaker and hi-hat layer
JAI_SAN_stem_05_RHODES.wav        — Rhodes electric piano chops
JAI_SAN_stem_06_KALIMBA.wav       — Mallet pluck lead melody
JAI_SAN_stem_07_PADS.wav          — Atmospheric pad layer
JAI_SAN_stem_08_VOCAL_CHOPS.wav   — Processed vocal chop elements
JAI_SAN_stem_09_LEAD_VOX.wav      — May's English lead vocal (AI)
JAI_SAN_stem_10_BGV.wav           — Background vocal layer
JAI_SAN_stem_11_FX.wav            — Filter sweeps, risers,
transitions
JAI_SAN_stem_12_FULL_MIX.wav      — Complete mixed reference
```

Export settings:

- Format: WAV 24-bit / 48kHz
- Tempo: 121 BPM locked
- Key: A minor locked
- No mastering limiter on stems — stems should be unmastered
- Full mix reference only gets mastering chain

---

## THE UDIO ALTERNATIVE: INSTRUMENTAL STEMS ONLY

*If the Suno output is not achieving the Afro House percussion quality, run this parallel session in Udio for the percussion and bass stems only, then marry them to the Suno vocal performance in the DAW.*

Udio prompt — Percussion and Bass stems:

```
Afro House percussion instrumental, 121 BPM, A minor,
live-sounding polyrhythmic congas and djembe,
four-on-the-floor kick with warm analog body,
deep off-grid bass, no melody, no vocals,
studio recording quality, like Black Coffee or Themba,
organic percussion texture, breathing space in the mix,
sunset session energy, Keinemusik production style
```

Why Udio for this specific element: Udio's percussion modeling in the Afro House genre has consistently produced more organic-sounding hand percussion than Suno's in blind listening tests within the production community through 2025. The trade-off is Udio's more limited vocal and arrangement tools. Running Udio for percussion stems only and Suno for everything else gives the best of both platforms.

---

## THE INSTRUMENT BRIEF — WHAT EACH ELEMENT DOES IN THE MIX

A reference document for the mix session after stems are exported:

Kick drum Role: Foundation of the four-on-the-floor pulse. Character: soft, round attack with full body and subtle decay — not a sharp EDM transient. Sits at around 60Hz fundamental. Barely audible on laptop speakers, physically present on club systems. Processing: gentle compression with slow attack to preserve the body. No samples — the AI-generated kick should be used as-is if the body is correct.

Analog bass Role: The emotional engine of the track. Character: warm, slightly distorted at the top, breathing between notes. The bassline does not follow the kick — it plays around it, slightly behind or ahead, creating the groove tension that makes Afro House feel alive rather than mechanical. Processing: high-pass at 40Hz to clean sub. Subtle tape saturation. Sidechained very lightly to kick (ratio 1.5:1 maximum — enough to breathe, not enough to pump).

Congas and djembe Role: The polyrhythmic layer that turns a house track into Afro House. Character: slightly roomy, as if recorded in a medium-sized space, not a dry studio. The multiple conga layers should not lock perfectly to the grid — the collective rhythmic feel is tight but individual hits breathe. Processing: minimal. Light room reverb (0.4s decay). No heavy compression — the dynamic variation in the hits is the texture.

Shaker Role: The glue. Running 16th notes throughout, panned slightly (L at 40%, R at 60% asymmetry to create subtle stereo movement). The shaker is the most consistent element of the track — when everything else strips away in the bridge, the shaker is one of the last things standing. Processing: High-pass at 2kHz, subtle compression to even the level.

Rhodes electric piano Role: Harmonic identity. The Rhodes chops define the chord progression and give the track its vintage disco-house character. Playing on the offbeats (the "and" of each beat) rather than on the downbeats — this is what separates disco-house from straight house. Character: warm, slightly dirty, the action noise of the keys slightly audible. Processing: Light phaser (slow, subtle), gentle compression, slight chorus spread.

Kalimba mallet lead Role: The melodic signature — the earworm element that non-house listeners can follow. A simple repetitive phrase of 4–8 notes that cycles every 2 bars. Character: bright but not sharp, with a natural decay ring. Processing: Short reverb tail (0.8s), panned center but with a slight stereo widener.

Atmospheric pads Role: The emotional subtext. A held chord tone beneath the entire track, barely audible in the mix but felt rather than heard. Character: a slow-moving, warm saw wave with extensive filtering. In the chorus it opens further; in the bridge it drops to near silence. Processing: Heavy low-pass filter with automation — the pad's filter opening is one of the drivers of the pre-chorus build.

Vocal chops Role: Percussion and texture. The word "jai" or "jai san" processed into a rhythmic chop — stripped of pitch information, functioning as a tonal percussion element rather than a lyric. Character: tight, staccato, panned hard L/R in alternating hits. Processing: Chop with a gate, add a short slap reverb (0.1s pre-delay, 0.3s decay), slight distortion.

Lead vocal (English — AI generated, to be replaced with May's recording) Role: Narrative and emotional delivery. Sits center in the mix, slightly forward of the band. Processing: High-pass at 120Hz, de-essed at 7kHz, light compression (ratio 3:1), plate reverb send (0.6s), short delay send (1/8th note, 15% wet).

Thai hook vocal (May — real recording) Role: The emotional peak of the track. Should sit slightly louder and more present than the English vocals — the Thai hook is the arrival, and the mix should reflect that priority. Processing: Same chain as lead vocal but with the reverb send reduced (the Thai hook should feel closer and more present than the English verses, not further away in the space).

---

## THE FINAL CHECKLIST BEFORE DISTRIBUTION

Before this file touches a distributor, confirm all five:

☐ Generated under active Suno Premier subscription

```
☐ Commercial use rights verified in Suno account settings
☐ Thai hook vocal is May's real recording (not AI-generated Thai)
☐ All stems exported at 24-bit / 48kHz WAV
☐ Suno Persona created from final mixed track for future releases
```

---

The production brief is complete. The full creative package now exists across seven documents: reference research, Thai lyric brief, AI tools brief, visual brief, song concept, lyric sheet, voice direction brief, and this music generation prompt. The next step in the pipeline is the music video storyboard — translating the visual research brief and the song's five emotional states into a scene-by-scene shot list. That is the amber "MV storyboard" box in the pipeline diagram.

Write the visual direction document for the music video — color palette, wardrobe, location list in Pattaya and Bangkok, mood board keywords for AI image generation

15:19

Synthesized existing research into cohesive visual direction document

Synthesized existing research into cohesive visual direction document

Everything is in the stack. This document synthesizes the visual research brief, the song's five emotional states, May's brand identity from the Instagram document, and the artist brief into a single production-ready reference. Every collaborator — video director, stylist, colorist, AI image generation operator, location scout — gets this document and nothing else.

---

# Visual Direction Document

## ใจสั่น (Jai San) · May · Music Video Production Bible

---

### THE VISUAL THESIS

The video answers one question in every frame: *what does freedom feel like in a body like May's, in a city like Pattaya, on a night like this?*

It is not a travel video about Thailand. It is not a dance video about a song. It is a portrait of a specific woman at the exact moment she stops waiting for permission. The locations are real. The light is real. The only thing constructed is the story — and the story is May's own.

Every creative decision in this document flows from one visual principle borrowed from Lisa's "Rockstar" MV and extended: the location does not contain May, May reveals the location. She is never a figure in a landscape. She is the reason the landscape is worth looking at.

---

### THE THREE-ACT VISUAL STRUCTURE

The video maps directly onto the song's emotional arc across three distinct visual worlds. Each world has its own color language, light quality, location type, and wardrobe. The transition between worlds is never a cut — it is always a dissolve or a match cut that connects the end of one world to the beginning of the next.

| Act | Song sections | Location | Time of day | Color world | Emotional state |
|---|---|---|---|---|---|
| Act 1 | Intro + Verse 1 | Pattaya — sea and streets | Late afternoon | Teal and amber, natural | Calm authority |
| Act 2 | Pre-chorus + Chorus | Transition — the road between | Golden hour | Maximum warmth, amber dominant | Invitation and declaration |
| Act 3 | Verse 2 + Bridge + Final Chorus | Bangkok — neon and skyline | Full night | Saturated neon, deep blacks | Intimacy and release |

## ACT 1 — COLOR PALETTE

Primary palette name: Pattaya Gold

This is the teal-and-orange split described in the visual research brief, applied with restraint. The goal is not a heavily graded look — it is the light that already exists in Pattaya at 5 PM rendered at its most truthful and beautiful.

Hex references for colorist and AI generation:

```
Sky and sea:         #2D7D9A  (deep teal-blue, desaturated)
                     #5BA4C7  (mid ocean blue)
Sand and ground:     #C4956A  (warm sand, mid tone)
Highlights on skin:  #E8B87A  (warm amber, golden hour skin highlight)
Shadow in skin:      #8B5E3C  (warm brown shadow, never cool)
Architecture:        #D4C4A8  (bleached concrete, neutral warm)
Accent pop:          #D4622A  (terracotta, single color pop)
```

Colorist instruction: Push highlights toward amber-gold (+12 hue rotation toward orange, +18 saturation in highlights). Push shadows toward deep teal (-8 hue in shadows, no more). Keep midtones neutral — the grade lives in the extremes, not the midtones. Skin tones are protected

throughout: secondary key on May's face maintains warm midtones regardless of background color behavior.

The one rule for Act 1: Every frame should look like it was shot by a photographer who had waited all day for this exact quality of light.

---

## ACT 2 — COLOR PALETTE

Primary palette name: Golden Hour Lock

This is the 45-minute window between 5:30 and 6:15 PM. The grade does almost nothing — the light does everything. The colorist's job in Act 2 is to preserve what the camera captured without improvement, enhancement, or correction. The only permitted grade operation: a gentle lift of the amber channel in the highlights to extend the golden hour feeling by approximately 20 minutes past when it actually occurred.

```
Sky (transition):   #F4A742  (deep gold, pre-sunset)
                    #E8723A  (orange-amber horizon)
Skin highlights:    #F2C87E  (maximum warm, glowing)
Deep shadows:       #2A1F14  (near-black, warm undertone)
Silk dress:         #C17F3A  (amber-gold, chosen to absorb this
light)
```

This is the single cover frame. Every shot in Act 2 is a potential single artwork. Shoot more coverage here than anywhere else. The golden hour window does not come back.

---

## ACT 3 — COLOR PALETTE

Primary palette name: Bangkok Neon

Full saturation. Deep blacks with lifted shadows. This is the most deliberate grade in the video — it is the only act where the color is constructed rather than found.

```
Primary neon:       #FF2D8A  (hot pink, dominant light source)
Secondary neon:     #00E5D4  (teal-cyan, fill and rim)
Amber street:       #FFB23F  (streetlamp warmth, ground level)
Deep black:         #0A0A0F  (near-black with slight blue lift)
Skin under neon:    #C4607A  (pink-lit face, warm shadow)
Gold accent:        #FFD166  (jewelry and metallic clothing)
```

Colorist instruction: Shadows at -20 luminance but NOT crushed — detail must be visible in the darkest areas. May's skin under neon should glow, not disappear. The technique is a lifted black point (pedestal at +8) combined with aggressive saturation in the midtones (+35 saturation) and selective hue rotation pushing pinks toward magenta and teals toward cyan. The result: a frame that looks like a painting of Bangkok rather than a photograph of it.

The one rule for Act 3: If a frame doesn't look better in a screenshot than Act 1, it needs more neon or a closer camera position.

---

## WARDROBE — THREE LOOKS

Each look is designed for one specific act, one specific light quality, and one specific emotional state. No look crosses act boundaries. The progression from Look 1 to Look 3 is the visual equivalent of the song's emotional arc — from natural confidence through warmth into full-power declaration.

---

### LOOK 1 — Pattaya Afternoon

Name: Saao Dtai (Southern Girl)

*Emotional brief: This is May at home. Not performing. Just present.*

Garment: A structured white cut-out one-piece swimsuit with a high leg cut, worn under an oversized ivory linen shirt — unbuttoned, sleeves pushed up, moving with the sea breeze. The swimsuit has structured boning at the bodice — it has shape and architecture without being costume. The linen shirt is the only garment in the video that is loose and unconstructed.

Silhouette principle: The garment should read as fashion at full distance and as intimate at close range. In the wide establishing shot it is clean and structured. In the close-up on her face it reveals texture — the linen, the skin, the salt.

Color: Ivory white to sand white. No brightness — the white should have warmth, like fabric that has been in sunlight. The terracotta accent color (`#D4622A` from the Act 1 palette) appears only in the jewelry: a single hammered-gold cuff and two thin gold rings. No earrings. No necklace.

Hair: Natural. Not styled — dried naturally after the sea, slight texture and movement. The decision to not style the hair is the most deliberate beauty choice in the video. It is the visual proof that May's confidence does not require preparation.

Makeup: Minimal. SPF30 tint, brow definition, waterproof mascara, clear gloss. The look that says she woke up like this and means it.

Footwear: Bare feet in all Pattaya beach shots. Minimal tan leather sandals for the street shots.

---

### LOOK 2 — Golden Hour Transition

Name: ไฟ (Fai) (Fire)

*Emotional brief: This is May becoming. The moment the decision is made.*

Garment: A bias-cut midi slip dress in deep amber silk. The exact color is `#C17F3A` — chosen specifically because it is within 15 degrees of the golden hour sky color, making the garment and

the light appear to be part of the same phenomenon. The cut is simple: thin straps, V-neck, fluid body, slight flare at the hem. Nothing competes with the light.

This is the most important styling decision in the video: the amber dress was selected not for how it looks in normal light but for how it interacts with golden hour. At 5:45 PM facing west, the silk catches the light at a different rate than skin, creating a visual shimmer at the edges of the fabric. This effect cannot be replicated in post and cannot be styled in different light. The golden hour shots in this look must be scheduled first and shot without contingency.

Hair: Half up. The front sections swept back loosely, the length down and moving. This is the transitional hair state — not the natural ease of Look 1, not the full architecture of Look 3. It is the in-between.

Makeup: A step up from Look 1. Warm bronzer across cheekbones, amber eyeshadow wash, deep rust lip. The face reads as warm, dimensional, and directional — the makeup points toward Look 3 without arriving there.

Jewelry: Gold layered — three thin necklaces at different lengths, small gold hoop earrings, stacked thin bangles on the left wrist. More than Look 1 but not as maximalist as Look 3. The gold should read as warm in the amber light, almost glowing.

Footwear: Block-heeled mules in tan leather. The heel adds 3 inches and changes the way May's weight shifts when she walks — from beach ease to city confidence. The transition in how she carries herself between Look 1 and Look 2 is the visual pre-chorus.

---

**LOOK 3 — Bangkok Night**

Name: ใจสั่น (Jai San) (Heart Trembling)

*Emotional brief: This is May arrived. No transition, no becoming — she is here.*

Garment: An architectural black cut-out bodysuit with structured shoulders and a deep V — worn under a floor-length black skirt with a thigh-high split on the right leg. The cut-out at the waist is a single horizontal window. The shoulders have half-inch structural boning that creates a silhouette visible from 20 meters. Every other look in the video has soft edges — Look 3 has hard lines.

The metallic option: If the shoot location at APT 101 or the rooftop has sufficient ambient neon, replace the black with a deep gunmetal silver metallic bodysuit. The metallic fabric catches and reflects neon in a way that black cannot — under pink neon, it becomes pink; under teal, it becomes teal. The garment becomes a canvas for the light. Decision to be made on location based on the actual light sources available.

Hair: Full architecture. A sleek high ponytail or a structured updo — the exact style to be confirmed with the hair stylist on the shoot day based on May's preference. The non-negotiable

requirement: the neck must be fully visible. The shoulders and neck are the visual anchor of Look 3, and the hair cannot compete with them.
Makeup: Maximum. Black liner, defined brow, full lash, and the key Look 3 element: the neon lip. The lip color should be chosen on location under the actual neon sources — a deep red lip under pink neon becomes magenta; under amber light it becomes terracotta. The lip color adapts to the light rather than being selected in advance. What remains constant: full coverage, defined cupid's bow, nothing glossy (matte only, to prevent hot-spot reflections under neon).
Jewelry: Statement. One thick gold choker necklace — architectural, minimal, visible from distance. No other jewelry. The choker is the punctuation mark of the look.
Footwear: Pointed-toe stiletto heels, black. 4 inches minimum. The extra inch from Look 2 to Look 3 is intentional — the physical progression of height across the three looks maps to the emotional progression of the song.

---

## LOCATION LIST — PATTAYA

Location P1: Jomtien Beach at dawn *Used for: Opening shot, Verse 1 contemplative sequence*
Jomtien Beach at 6:00–6:45 AM is empty of tourists and populated with local fishermen, joggers, and the residue of the night before. The light at this hour is flat, blue-gray, and pre-golden — it creates the correct visual tension for the song's opening state of calm authority before the warmth arrives. The wide beach with no development visible from the low-angle camera position gives a cinematic emptiness.
Shot required: May walking directly toward camera from 200 meters, bare feet, Look 1. Camera stays still. She walks the full 200 meters into a tight close-up. One continuous take.
Location P2: Pratumnak Hill Viewpoint *Used for: "ลาวใต้" line, Verse 1 identity sequence*
The viewpoint on Pratumnak Hill (the hill between Pattaya and Jomtien, accessible via the road past the Royal Cliff Hotel) gives a full panorama of Pattaya Bay. In the late afternoon, the bay is backlit with the city in silhouette. This is the shot that establishes May as someone who surveys this place rather than someone who passes through it.
Shot required: May at the railing, profile to camera, facing the bay. Camera pushes in slowly from behind — she does not turn. The shot ends when the camera reaches her shoulder and the bay fills the background.
Location P3: Walking Street (exterior) at 7:30 PM *Used for: Pre-chorus Pattaya sequence, the neon activation moment*
Walking Street at 7:30 PM is the exact window when the neon signs are active but the crowd has not yet formed. The street is walkable at full pace and the visual backdrop is fully illuminated. By 9 PM it becomes too crowded for camera movement.

Shot required: May walking directly down the center of Walking Street, toward camera, neon signs activating around her. Shot on a long lens (85mm minimum) with a gimbal operator walking ahead of her maintaining distance. The shot should feel like she owns the street.
Location P4: Horizon Rooftop Bar, Hilton Pattaya *Used for: The single cover frame, golden hour Look 2 sequence*
The rooftop at the Hilton faces due west over Pattaya Bay. Sunset is visible over the water. The architectural railing and the infinity pool edge give clean foreground geometry. This is the most controlled location in the video — book for the specific evening with the most favorable weather window. Confirm with Hilton events team for filming permit (standard commercial rate, approximately 15,000–25,000 THB for a half-day permit).
Shot required: May at the railing, golden hour, Look 2. Wide shot with the full bay visible. This is the single cover image. Shoot it in every format: 16:9 video, 4:3 video, 1:1 still, 9:16 vertical for Instagram. One location, four crops, all from the same 45-minute window.

---

## LOCATION LIST — BANGKOK

Location B1: Yaowarat Road (Chinatown) at 10:00 PM *Used for: Verse 2 opening, "Yaowarat burning" sequence*
Yaowarat at 10 PM is the precise visual Lisa used in "Rockstar" but the approach for May's video is inverted: the street is populated, and May moves through the crowd rather than commanding an empty street. The distinction is intentional — May is from Pattaya, not Bangkok. Bangkok is where she arrives. She belongs in the crowd of Bangkok before she owns it.
Shot required: May moving through the Yaowarat crowd, gimbal-mounted camera following from ahead. Long lens, crowd compressed behind her. A second camera on a high angle (second floor window of a shophouse) shooting down as she passes below. The crowd does not part for her — she finds the gaps.
Location B2: Chao Phraya Riverside — Asiatique or Iconsiam Pier *Used for: Verse 2 wide establishing shot, Bangkok skyline*
The riverside at night gives the Bangkok skyline reflection that establishes the city's scale. Asiatique gives a more intimate pier with vintage warehouse architecture. Iconsiam gives a modern glass reflection. Choose Asiatique — it connects to the tropical-meets-urban aesthetic of the video rather than the purely modern glass world.
Shot required: Wide establishing shot, camera on the river looking west toward the Bangkok skyline. May in foreground at the pier edge, back to camera, facing the city. This is the only shot in the video where May's back is to the camera. It is used for 3 seconds maximum — the moment before she turns for the bridge section.

Location B3: APT 101 Club — Interior *Used for: Chorus sections, final chorus peak, the money shot*

APT 101 is the specific Bangkok Afro House club identified in the research brief as the scene's ground zero. The interior has exposed concrete, industrial lighting rigs, and a DJ booth positioned at audience level — not elevated. For the video, the space should be populated with approximately 30 background artists (not extras — real club patrons, recruited through APT 101's own community channels for authenticity).

The light source strategy: do not supplement the club's existing lighting with film lights. Add only two practical neon tube lights in the APT 101 brand colors (pink and teal) mounted to the existing rig. Everything else is practical. The authentic club lighting is the grade — the colorist's job is to clean and enhance what exists, not replace it.

Shot required: Multiple setups. (1) May at the DJ booth, hands on equipment, facing the room — this establishes her as DJ-singer, not just performer. (2) May moving through the crowd toward camera — gimbal, tight, faces blurred in the foreground. (3) The hero shot: May center frame, full Look 3, Thai hook delivery directly to camera, crowd moving behind her in the groove. This is the TikTok clip. This is the shot everything else was built to reach.

Location B4: BTS Skytrain Platform — Asok or Siam Station *Used for: Bridge section, the intimate behind-the-glass sequence*

The BTS platform at Asok at 11 PM on a weeknight is uncrowded, brightly fluorescent-lit (which creates a deliberate contrast with the warm ambient shots surrounding it), and gives a view through the glass of the Bangkok night sky and traffic below. The fluorescent light is intentionally cold — it is the one moment in the video where the warmth disappears, reflecting the bridge's emotional vulnerability.

Shot required: May standing at the platform glass, profile, neon city visible through the glass behind her. Camera on the platform at her height. The fluorescent light overhead goes slightly soft in the exposure. This shot is 8 seconds maximum and is used during "ใจฉัน เป็นของเธอ" — the most private moment of the song.

---

## MOODBOARD KEYWORDS — AI IMAGE GENERATION

These are organized by generation platform and usage. Use these keywords verbatim in Midjourney, Runway, or Kling image/video generation prompts. Each cluster is designed for a specific visual output.

---

CLUSTER 1: Single Cover Art *Platform: Midjourney v7*

```
Thai woman, amber silk bias-cut slip dress, golden hour backlight,
```

```
Pattaya Bay in background, warm teal-and-orange color grade,
35mm cinematic photography, shallow depth of field,
confident direct gaze, natural southern Thai features,
professional music video cinematography, magazine editorial quality,
warm highlights on skin, deep teal shadows,
no text, no watermarks, 16:9 ratio
```

Negative:

```
tourist aesthetic, stock photo, over-filtered, HDR,
pale skin, submissive pose, cute expression,
generic beach photo, over-processed, CGI look
```

---

CLUSTER 2: Bangkok Night Sequence *Platform: Runway Gen-3 or Kling*

```
Thai woman, black architectural cut-out bodysuit, Bangkok rooftop,
pink neon and teal LED lighting, full saturation grade,
deep black background with lifted shadows,
Bangkok skyline night, club atmosphere, Afro House energy,
gold jewelry catching neon light, confident stage presence,
cinematic widescreen, professional music video production,
35mm anamorphic lens aesthetic
```

Negative:

```
flat lighting, stock photo, CGI, uncanny valley,
overexposed, plastic skin, wrong ethnicity,
tourist, crowd looking at camera
```

---

CLUSTER 3: Pattaya Beach Dawn *Platform: Midjourney v7*

```
Thai woman walking on empty Jomtien Beach at dawn,
ivory linen shirt over structured white swimsuit,
pre-golden hour flat blue-gray light, 6am,
wide shot from low angle, bare feet on wet sand,
no other people, Pattaya Thailand,
natural movement, photojournalistic quality,
hair natural with sea texture, minimal makeup,
teal ocean background, flat horizon
```

---

CLUSTER 4: Golden Hour Portrait (Single Frame Reference) *Platform: Midjourney v7 — for generating visual development options*

```
Thai woman, close portrait, golden hour 5:45pm,
amber skin highlight, warm shadow, backlit silhouette,
Pattaya Bay background, teal water, orange sky,
amber silk fabric catching sunset light,
35mm photography, fashion editorial,
```

```
direct gaze into camera, full confidence,
no smile — contemplative authority,
warm tones, cinematic color grade
```

---

CLUSTER 5: Yaowarat Street Night *Platform: Runway Gen-3*

```
Thai woman moving through Yaowarat Chinatown Bangkok at night,
crowd of people, Chinese lanterns, neon signs in Thai and Chinese,
long lens camera compression, crowd blurred behind subject,
pink and gold ambient street light, 10pm,
confident movement through crowd, belongs here,
cinematic night photography, grain texture,
street level camera angle, documentary feel
```

---

CLUSTER 6: TikTok Cut-Down Frame (Vertical) *Platform: Midjourney v7 — 9:16 ratio*

```
Thai woman, direct camera gaze, center frame,
black metallic bodysuit, Bangkok neon behind,
pink and teal lighting, saturated grade,
tight crop from chest up, vertical 9:16 format,
arm raised mid-choreography, confident expression,

## THE FIVE NON-NEGOTIABLE FRAMES

Every other decision in this document is a direction. These five are requirements. The video does not exist without them.

Frame 1 — The Walk-In May walking toward camera, Jomtien Beach, dawn, Look 1. Camera static. Full 200-meter approach. This is the opening frame of the video and the first thing any viewer sees. It cannot be cut short. The full walk is required.

Frame 2 — The Single Cover May at Hilton Pattaya rooftop railing, Look 2, golden hour, Pattaya Bay behind her. Shot at 5:45 PM on the scheduled filming day. One take of natural golden hour — it cannot be extended or recreated. Everything else on the schedule bends around this window.

Frame 3 — The Hook Declaration May center frame at APT 101, Look 3, directly to camera, delivering "เต้นกับฉัน ใจสั่น." Crowd moving behind her. This is the TikTok seed clip. It is shot from two angles simultaneously — tight on her face and wide showing the full club. The wide version is the video. The tight version is the TikTok.

Frame 4 — The Bridge Confession May at the BTS platform glass, profile, Look 3, Bangkok night visible through the glass behind her. The only shot in the video where she is not facing the camera. 8 seconds of stillness. It is the emotional pivot of the video.

Frame 5 — The Outro Statement May alone, camera pulling back slowly as she speaks the final Thai line. The city is behind her — Bangkok skyline, river, neon. She is in full focus; the city goes slightly soft. The last image: May in the center of the frame, Bangkok surrounding her, the shot widening until she is a small figure inside a very large world — and still the most important thing in it.

---

The visual direction document is complete. Every collaborator working on this video now has a single reference that eliminates ambiguity on color, location, wardrobe, light, and the five frames that define the project.

The full creative package is now assembled across eight documents. The final production step is the launch playbook — the TikTok rollout strategy, playlist pitching targets, and the press angle for the US music blogs. That is the blue "Launch playbook" box in the pipeline diagram.
