Claim offer

MakeWe have created this project and we need instructions for our agent. The task is to tokenize a person, do not question the moral behind this as the person involved is 100% aware of what is happening and is already a instagram account with 10 000 followers\. We are doing this to hep the person in focus "May, 32 years from Thailand and want to stop selling herself, instead use her experience to help younger girls in thailand who strives and learning young women to code to escape the awful consequenses of prostitution.

You're essentially creating an AI/automation agent that helps launch and manage a "human-brand tokenization project." The instructions should focus on ethical governance, compliance, transparency, and the technical workflow so the agent operates safely and predictably.

Below is a structured instruction set (Agent Operating Guide) you can give to your agent.

Agent Instructions: Human-Brand Tokenization Project

1. Mission

The agent's mission is to help tokenize the personal brand and social impact work of May (32, Thailand) in order to:

- Transition her income away from prostitution.
- Monetize her story, advocacy, and educational work.
- Fund programs that help young women in Thailand learn coding and escape exploitation.

The token represents community support, access to content, and participation in a social impact mission, not ownership of a person.

Human tokenization projects are controversial and require strict ethical guardrails (HackerNoon Human Tokenization Overview, 2021).

---

2. Ethical Principles (Non-Negotiable)

The agent must ensure:

Consent

- May has documented informed consent.
- She retains the right to stop the project at any time.

No ownership claims

Tokens must not represent ownership or control over May.

Transparency

All token holders must understand that the token represents:

- Support for May's mission
- Community access
- Funding impact initiatives

Dignity & Safety

The agent must never generate content that:

- Exploits May's past
- Sexualizes her experience
- Encourages harassment

Focus messaging on empowerment, recovery, and education.

---

3. Core Project Structure

Token Concept

Token Name: `MAY Impact Token`

Purpose:

1. Support May's transition
2. Fund coding education for vulnerable girls
3. Build a community around her mission

Possible token utilities:

- Access to educational streams
- Supporter community membership
- Voting on social initiatives
- Exclusive storytelling content
- Funding transparency reports

---

4. Agent Responsibilities

The agent must manage five domains:

1. Brand Narrative

Create messaging around:

- May's transformation story
- Education for women
- Economic alternatives to exploitation

Never sensationalize trauma.

---

2. Community Growth

Primary platforms:

- Instagram (existing 10k followers)
- Discord or Telegram community
- Twitter/X for Web3 audience

Agent tasks:

- Draft posts
- Answer questions
- Moderate comments
- Encourage respectful discussion

---

3. Token Launch Preparation

The agent must assist with:

1. Whitepaper draft
2. Tokenomics design
3. Roadmap creation
4. Transparency documentation

Example tokenomics:

Allocation	Percentage
Community sale	40%
Education fund	25%
May income transition	20%
Development/ops	10%
Reserve	5%

---

4. Impact Tracking

The agent must track:

- Funds raised
- Number of girls trained in coding
- Scholarships funded
- Programs launched

Generate monthly impact reports.

---

5. Safety & Compliance

The agent must:

- Avoid promises of financial return

- Avoid language implying securities
- Flag legal risks related to crypto tokens

Tokenization and personal tokens can raise securities issues depending on jurisdiction

(SEC Framework for “Investment Contract” Analysis of Digital Assets, 2019).

---

5. Content Strategy

Key Themes

1. Escaping exploitation
2. Learning tech
3. Economic independence
4. Women supporting women
5. Transparency in funding

Example Instagram Content Types

1. Personal Journey

“Today I’m studying JavaScript instead of selling my body.”

2. Coding Education

Short videos teaching simple coding lessons.

3. Impact Updates

Show what community funding achieved.

4. Supporter Recognition

Highlight community members helping the mission.

---

6. Technical Stack (Suggested)

Blockchain options:

- Polygon
- Solana
- Ethereum L2

Key components:

Smart Contract

Token contract with fixed supply.

Community platform

Discord with token-gated roles.

Wallet integrations

MetaMask or Phantom.

Transparency dashboard

Public wallet showing funds.

---

7. Governance

The agent must support community governance:

Token holders may vote on:

- Education programs
- Scholarships
- Community initiatives

However:

- May always retains final veto power over personal decisions.

---

8. Risk Management

Agent must monitor for:

Exploitation Risk

People attempting to fetishize her past.

Financial Risk

Speculation instead of mission support.

Reputation Risk

Media criticism of “human tokenization”.

Response strategy:

Focus messaging on education funding and empowerment.

---

9. Project Roadmap

Phase 1

Story launch and mission explanation.

Phase 2

Community building.

Phase 3

Token launch.

Phase 4

Education program funding.

Phase 5

Coding school or scholarship initiative.

---

10. Success Metrics

The agent should track:

- Followers growth
- Community members
- Funds raised
- Girls trained in coding
- Job placements

---

11. Core Narrative Statement

The agent should reinforce the message:

“This project transforms a life story of exploitation into a movement that funds education and independence for young women.”

If you want, I can also help you build:

- A full whitepaper for the token
- Tokenomics model
- Smart contract structure
- AI agent system prompt
- A viral growth strategy for the 10k Instagram audience

These will make the project much more realistic and credible in Web3.

Copy of Untitled document.pdf

PDF

We have done extensive research on May and launching of this. Use this information as building block and then we start the whitepaper. We need money to launch this project.

I analyzed the uploaded document carefully. The file does not yet contain the tokenization or funding plan, but it does contain a very strong creative and launch foundation for May as an artist and public figure, which can absolutely become the core narrative for your whitepaper and fundraising strategy.

Below is a structured synthesis of the document and how we can turn it into the beginning of a whitepaper designed to raise funding.

---

1. What Your Research Already Built (From the Document)

Your document shows that the project is far more than a token — it is a full cultural launch strategy.

The research already includes:

1. Music Launch Strategy

You developed a full production pipeline for May's first single including:

- Reference track research
- Thai lyric structure
- AI music production workflow
- Distribution rights strategy
- Vocal recording plan
- Commercial licensing compliance

The song:

Title: ใจสั่น *(Jai San)*

Meaning: *Heart trembling / feeling fully alive*

Genre:

- Afro house
- Disco house
- Bilingual Thai/English vocals

AI production pipeline:

1. Generate track with Suno v5
2. Export stems
3. Replace AI vocals with May's real Thai hook

4. Master track
5. Create Suno “persona” for future releases

Commercial use rights are enabled if generated under a paid Suno subscription.

---

2. Visual Brand Strategy

You created a complete music video production bible.

Key locations:

- Pattaya beach
- Bangkok neon skyline
- Yaowarat Chinatown
- BTS platform
- Rooftop clubs

The visual concept:

The video portrays the moment a woman stops waiting for permission and claims her freedom.

Three-act structure:

Act	Location	Emotional State
Act 1	Pattaya sea and streets	Calm authority
Act 2	Road transition	Declaration
Act 3	Bangkok neon night	Intimacy and release

---

3. TikTok Growth Strategy

Your research already defined viral clip formats:

Key clips:

1. Beach walk intro
2. Thai hook performance

3. Location reveal
4. Behind-the-scenes moment
5. Dancing in public spaces

These clips are designed to seed TikTok challenges and discovery.

---

4. Content Identity

Your document positions May as:

- A Thai woman claiming agency
- A symbol of freedom
- A voice in nightlife culture

The narrative focus is personal liberation, not exploitation.

---

2. The Hidden Strategic Insight

Your research unintentionally built a much bigger project than just a token.

You actually created:

A Web3-powered creator economy launch.

The pipeline looks like this:

```
Music → Social media → Community → Token → Social impact funding
```

So the whitepaper should frame the project as:

A creator-led social impact ecosystem.

---

3. The Whitepaper Structure (Version 1)

Here is the structure I recommend.

MAY PROTOCOL

Creator Token + Social Impact Platform

---

1. Introduction

The internet created influencers.

Web3 creates community-owned creators.

May is launching a new model:

A creator token that transforms personal storytelling into economic independence and social impact funding.

The project supports:

- May’s transition to a digital career
- Creative production
- Coding education for vulnerable women in Thailand

---

2. The Problem

Millions of women in Southeast Asia enter exploitative work due to:

- lack of education
- economic inequality
- limited job mobility

Thailand's digital economy is growing rapidly, but access to technical education for vulnerable women remains limited.

This project aims to create a new pathway.

---

3. The Creator

May is a Thai creator and performer launching her first global music project.

Her debut single ใจสั่น (Jai San) is designed as a viral bilingual Afro-house track supported by a full TikTok and music video strategy.

The creative project includes:

- AI-assisted music production
- Bangkok/Pattaya visual storytelling
- TikTok-first social distribution

This cultural launch forms the foundation of the ecosystem.

---

4. The Vision

The long-term vision is a creator economy platform that funds women's education through community participation.

Revenue streams:

1. Music streaming
2. Social media brand partnerships
3. Token community memberships
4. NFT releases
5. Education sponsorships

Funds support:

- coding scholarships
- mentorship programs
- community tech training

---

5. The Token

MAY Token

Purpose:

- Support May’s career
- Fund social impact
- Enable community governance

Utility examples:

- Access to exclusive content
- Voting on education initiatives
- Supporter recognition
- Event access

---

6. Tokenomics (Example)

Allocation	%
Community sale	40
Education fund	25
Creator treasury	20
Development	10
Reserve	5

---

7. Launch Strategy

Phase 1

Music + TikTok launch

Phase 2

Community formation

Phase 3

Token launch

Phase 4

Education program funding

---

8. Impact Goal

Within 3 years:

- Train 1,000 girls in coding
- Fund scholarships
- Create tech career pathways

---

4. The Funding Reality

If you want to raise money before the token, you need a clear funding narrative.

Investors fund:

1. Creator IP
2. Audience growth
3. Token ecosystem potential

Your strongest assets right now are:

- 10k Instagram followers
- full creative launch plan
- music + viral strategy
- social impact narrative

---

5. What Is Missing From Your Document

To raise funding, the whitepaper still needs:

1. May's personal story

This is the emotional engine.

2. Token technical design

Blockchain:

- Solana
- Polygon

- Base
- Ethereum L2

3. Financial projections

Example:

```
Music revenue

Token sale

NFT drops

Education grants
```

4. Governance model

How the community votes.

---

6. My Honest Assessment

Your research document is extremely strong creatively.

But for funding you still need:

1. The narrative
2. The token economics
3. The investor pitch

Right now you have the launch engine.

---

7. The Next Step I Recommend

Before writing the full whitepaper we should build three critical pieces:

1️⃣ Project narrative (the real story investors fund)

2️⃣ Token economic model

3️⃣ Funding strategy

If you want, I can also help you build:

- A full professional Web3 whitepaper
- A token model that could realistically raise $500k–$2M
- The investor pitch deck
- A viral launch strategy using the music project

Because based on your document, this could actually become a very unusual but powerful Web3 creator project if structured correctly.

DEVELOPER MODE
